Program Delivery

- **Delivery:**
 - In person
- **Location:**
 - Ashtabula Campus
 - East Liverpool Campus
 - Geauga Campus
 - Kent Campus
 - Salem Campus
 - Stark Campus
 - Trumbull Campus
 - Tuscarawas Campus

Examples of Declared Majors

The top majors declared by students earning a degree from Kent State in 2021 who started in the Exploratory program:

- Psychology
- Nursing
- Public Health
- Human Development and Family Studies
- Criminology and Justice Studies
- Business Management
- Communication Studies
- Biology
- Marketing
- Finance

- Public Relations
- English

Admission Requirements

The university affirmatively strives to provide educational opportunities and access to students with varied backgrounds, those with special talents and adult students who graduated from high school three or more years ago.

First-Year Students on the Kent Campus: First-year admission policy on the Kent Campus is selective. Admission decisions are based upon cumulative grade point average, strength of high school college preparatory curriculum and grade trends. Students not admissible to the Kent Campus may be administratively referred to one of the seven regional campuses to begin their college coursework. For more information, visit the admissions website for first-year students.

First-Year Students on the Regional Campuses: First-year admission to Kent State's campuses at Ashtabula, East Liverpool, Geauga, Salem, Stark, Trumbull and Tuscarawas, as well as the Twinsburg Academic Center, is open to anyone with a high school diploma or its equivalent. For more information on admissions, contact the Regional Campuses admissions offices.

International Students: All international students must provide proof of English language proficiency unless they meet specific exceptions. For more information, visit the admissions website for international students.

Transfer Students: Students who have attended any other educational institution after graduating from high school must apply as undergraduate transfer students. For more information, visit the admissions website for transfer students.

Former Students: Former Kent State students or graduates who have not attended another college or university since Kent State may complete the reenrollment or reinstatement form on the University Registrar's website.

Admission policies for undergraduate students may be found in the University Catalog.

Some programs may require that students meet certain requirements before progressing through the program. For programs with progression requirements, the information is shown on the Coursework tab.

Roadmap

This roadmap is a recommended semester-by-semester plan of study for this major. However, courses designated as critical (!) must be completed in the semester listed to ensure a timely graduation.

	Semester One	Credits
!	UC 10001 FLASHES 101	1
	Kent Core Requirement	3
	Kent Core Requirement	3
	Kent Core Requirement	3
	Kent Core Requirement	3
	Kent Core Requirement	3
	Credit Hours	16
	Semester Two	
!	UC 20010 CAREER NAVIGATION: CONSTRUCTING POSSIBILITIES	2
	Kent Core Requirement	3
	Kent Core Requirement	3

Kent Core Requirement	3
Kent Core Requirement	3
Credit Hours	14
Semester Three	
Kent Core Requirement	3
Kent Core Requirement	3
Kent Core Requirement	3
Elective or Foreign Language	6
Credit Hours	15
Minimum Total Credit Hours:	45

Full Description

The Exploratory pre-major affords a tremendous opportunity for students explore, engage and succeed with purpose—confidently declaring their major. Students benefit from the guidance, advising and support offered in the Exploratory Program. Beginning in a student's first semester, academic advisors partner with students through their exploration process with a personalized Exploratory Plan.

The Exploratory pre-major does not lead to a degree. Students must declare a degree major by the time they have earned 45 credit hours at Kent State University.

The Exploratory pre-major comprises the following interest areas.

- **Aeronautics, Applied Engineering and Technology.** Are you curious about how things work? Are you a great problem solver, have a flare for detail and organizing and an interest in green technologies that can improve the quality of life for people? Maybe you enjoy using technology to get things done or to solve problems when they arise, or you spend time playing flight simulation video games. If so, you might wish to consider careers in aviation, emerging technologies, production or manufacturing and sustainability.
- **Biological Sciences, Health and Wellness.** Are you committed to improving the health and well-being of others? Do you like to study human behavior or want to pursue a career in nursing, nutrition, speech pathology and audiology, counseling or other health-related fields? You may want to consider a major in the area of biological sciences, health and wellness where you will learn to use the knowledge and techniques of biological and biomedical science as well as the knowledge of the helping professions to promote the maintenance of health and the prevention of illness.
- **Business.** Are you a problem solver and good communicator? Do you like to think strategically and lead others? You may find that a major in the area of business is right for you. Learn to analyze business problems through the development of skills in accounting, finance, economics and information systems and gain an understanding of real-world business problems through case studies and simulations.
- **Communications, Journalism and Media.** If you can imagine yourself writing for a major news organization, producing television shows and movies, providing corporate training and development, designing political or health campaigns, working as a social media manager, creating advertising or public relations campaigns or working as a speech writer for CEOs or political leaders, majors in this field will appeal to you. Opportunities spanning multiple industries await you in TV, radio, film, print or electronic media, corporate communications, international business and diplomacy. Learn different aspects of communication and information theory, research, use and practice while engaging in scholarly investigations and practical applications of the elements and means of creating, managing, using and evaluating messages.
- **Computers, Mathematics and Information Sciences.** Can you easily solve a Rubik's cube or disentanglement puzzle, figure out logic teasers or optical illusions and decrypt secret message codes? These games of strategy are good indicators that your problem-solving and critical thinking skills could be applied to the study of information and computation, as well as the new area of digital sciences. Understand the properties, uses and impact of the programs used to implement software and use that understanding to create new programs or improve existing ones.
- **Design.** Do you enjoy the process of communicating through visual means – using illustration, photography, motion graphics or the Internet to express a concept or solve a problem? Are you intrigued by the use of lights, stage props and sound in theatre and dance productions to create unique environments? Or perhaps the environment you are interested in is one of residential and commercial spaces – the lighting, interior materials and color, signage and graphics or the very structure and form of a building. Are you admired for your sense of fashion and have an ability and interest in designing and constructing your concepts? A wide range of academic programs in design provide students with an opportunity to merge a creative life with a profession and to work individually, collaboratively or within an organization to bring value and beauty to our global community.
- **Education and Teaching.** Can you envision yourself shaping young minds and preparing them for a successful future? Do those who know you well describe you as nurturing, patient, organized, a multi-tasker good at explaining things and somewhat conventional in your views? If these adjectives resonate with you, then you'll probably find a rewarding career as an educator. For those interested in advanced degrees in schools, schooling, education in non-school settings and leadership positions, there are opportunities to add endorsements, licenses or degrees to strengthen knowledge in teaching, learning, administration and leadership in a variety of disciplines.
- **Government, Public Policy and Justice.** Are you able to resolve disputes? Are you committed to the pursuit of truth? If you are also a detailed problem solver, articulate communicator, and passionate about righting wrongs, you should explore majors in this area. Study the action, regulatory measures, laws, social service agency engagement, social justice and funding priorities developed by government, agencies or representatives, and use qualitative and quantitative methods to understand and assess their impact.
- **Human Services and Social Sciences.** Do you want to make a difference in the lives of others? As long as you are resourceful, committed, empathic and empowering, you can help to change the world. Start living out your calling by providing a voice for the people who need it most.
- **Languages, Literature and Culture.** Have you wondered about people and their roots and history? Do you enjoy languages? Study the creation, organization and use of human knowledge, belief and behavior. Investigate how the development of symbolic languages and social learning have impacted shared attitudes, values, goals and practices associated with human institutions, organizations and groups.
- **Physical Sciences and the Environment.** If you are intrigued by the natural world and its sustainability, you may have happened upon your ideal area of study. You should be highly inquisitive, detail oriented, analytical and adventurous. Or, you may choose to prepare for scientific careers in the fascinating world of physical science,

which uses experimental and quantitative methods to study, model and understand natural and physical phenomena.

- **Sport, Recreation and Hospitality.** Do you want to be in the business of playing? Your competitive, persistent nature will serve you well on the athletic field, as well as in sports management or marketing/promotion. You may also consider the hospitality industry and event planning or community-based park and wellness facilities. The ability to plan activities, motivate and involve participants is critical.
- **Visual and Performing Arts.** Do you find it exciting to express your ideas and emotions through art, music or dance? Are you intrigued by the process of staging productions? Do you enjoy studying the history of visual and performing arts? If you are disciplined, energetic and drawn to challenging artistic environments that demand your best, then a major in the visual and performing arts could be the right choice for you. Study at the graduate level fosters an exciting intersection between professional training and academic excellence where you are encouraged to create artistic projects that combine theory, history, criticism, pedagogy and interdisciplinary studies.

To assist students in making informed major choices by the time they reach 45 credit hours, all Exploratory students participate in personalized Exploration Plan. There are six main components of the Exploration Plan that students participate. Students will:

1. Select one of **13 areas of interest** to begin exploring. This is the first step and will be completed before the student's first semester.
2. Create a **Major Action Plan** using the results of a career readiness inventory and continuously update the plan until a major is declared.
3. Engage in the **Flashes 101** course (UC 10001), which will focus on the transition to college and utilizes a curriculum developed specifically for exploratory students, including career exploration, developing an awareness of diverse perspectives, learning about their strengths, interests and much more.
4. Enroll in **Coursework with Peers**, providing students with the opportunity to network with fellow peers and create study groups. Some of the courses include Kent Core and introductory courses.
5. Enroll in **Career Navigation** in the student's second semester. In this course, students explore themselves, explore careers, make connections and set career-related goals. As a bonus, if students are part of the Exploratory Learning Community, they will take this course with other learning community students.
6. Participate in the **Exploratory Learning Community**. The Exploratory Learning Community is designed to assist students in confidently selecting their major with programming focused on exploration of careers and majors, leadership and academic success. Joining the learning community is a great way for students to build connections with their peers and gain access to more support through their career and major exploration. The Exploratory Learning Community is housed in Lake Hall for students living on campus; however, Honors College students living in honors housing and students who commute may also join.

Each Exploratory student is assigned an academic advisor. The expert academic advisors are focused on partnering with the student. This partnership includes guiding students through their personalized Exploration Plan, keeping them on track to declare their major (and staying on track to graduate as planned), and celebrating their major declaration and graduation. Exploratory academic advisors are housed in the Exploratory Advising Center; students have a minimum of one required meeting with an advisor each semester.
