may complete a minimum 18 credit hours of biological sciences (BSCI) courses toward the degree.

The Department of Biological Sciences frequently offers special topics classes in specialized areas of interest, which can count towards the degree when approved to be part of a student’s program of study. Coursework in other fields within the natural and physical sciences may be used to meet credit hour requirements when approved to be part of the student’s program of study.

**Program Learning Outcomes**

Graduates of this program will be able to:

1. Understand advanced biological concepts beyond the scope of the typical undergraduate degree and to increase the depth of their knowledge through coursework and hands-on experiences.
2. Apply scientific principles and appreciate work outside of their particular field.
3. Effectively communicate about science with colleagues as well as those outside of the student's area of expertise.
4. Develop the necessary laboratory skills that will allow testing of hypotheses.

**Full Description**

The Master of Arts degree in Biology is for students wishing to gain additional knowledge in any area of the biological sciences. This is a non-thesis master's degree designed for secondary school science teachers, individuals looking for additional background or preparation for professional school (e.g. medicine, dentistry or Ph.D. programs) and those seeking employment in life science industries in a non-research capacity.

The Biology major includes the following optional concentrations:

- The **Biological Data Analytics** concentration combines required courses in data analytics and elective options in biology to provide students with the understanding of the type of data collected while conducting biological research and how to analyze it.
- The **Cellular and Molecular Biology** concentration provides a heavy focus on cell-to-cell interactions and signaling pathways to give students a deep understanding of the cellular and molecular processes that occur within cells and physiological systems.
- The **Environmental Biology** concentration provides students with a balance between better understanding the relationships between organisms and the environment and how this balance can be sustained through environmental management and conservation.
- The **Medical Biology** concentration provides students with a deep understanding of the type of data collected while conducting biological research and how to analyze it.

Students who declare the Biology major with no concentration will select their area of specialization in consultation with an academic faculty advisor.
