* Source of occupation titles and labor data comes from the U.S. Bureau of Labor Statistics’ Occupational Outlook Handbook. Data comprises projected percent change in employment over the next 10 years; nation-wide employment numbers; and the yearly median wage at which half of the workers in the occupation earned more than that amount and half earned less.
Requirements

Quantitative Methods of Psychology Concentration

Additional Requirements for Students Not Declaring the Concentration

Minimum Total Credit Hours: 113

1 PSYC 71894 is required for students who teach starting their third year.
2 A limited number of graduate courses outside the department may be credited toward graduation. No 50000-level psychology courses may be applied to the degree. PSYC 81498 can be used to partially satisfy additional program electives.
3 Doctoral candidates, upon admission to candidacy, must register for a total of 30 hours. It is expected that doctoral candidates will continuously register for PSYC 81199, and thereafter PSYC 81299, each semester, until all requirements for the degree have been met.

Additional Requirements for Students Not Declaring a Concentration

Choose from the following:

1. PSYC 71894 COLLEGE TEACHING OF PSYCHOLOGY
2. PSYC 72392 CLINICAL PRACTICUM
3. PSYC 72492 ADVANCED PRACTICUM

Additional Program Electives 2

Program Learning Outcomes

Graduates of this program will be able to:

1. Demonstrate competencies in research methodologies specific to their area of interest.
2. Demonstrate competencies in teaching undergraduate courses.
3. Demonstrate competencies in providing psychological assessment and treatment services.

Full Description

The Ph.D. degree in Clinical Psychology prepares students to conduct research, to serve on college and university faculties and to provide a range of clinical services. The program adheres to the clinical scientist model of education and training, which is founded on the idea that the practice of psychology should be based on the science of psychology, and that practicing psychologists should be able to translate clinical observation into researchable questions and pursue new knowledge on the basis of their observations. Students are expected to develop an area of special expertise in research, and opportunities for specialized clinical training are offered.

In addition to general training in clinical psychology, students may receive specialized research and clinical training in one of the following areas: adult psychopathology, assessment, child, health or neuropsychology.

The Clinical Psychology major includes the following optional concentration:

- The Quantitative Methods of Psychology optional concentration trains individuals in some of the more recent developments of statistical science and, particularly, the application of these developments to real-world psychological data. One unique feature of the concentration is the focus on the application of quantitative methods in psychological research; although department faculty members have expertise in an area of statistics, they also conduct research in a substantive area of psychology. The concentration is intended for those students who intend to pursue academic careers, wherein the use of advanced quantitative methods in one's own program of research is highly valued, and who also intend to teach undergraduate or graduate courses in statistical methods.
