*Note
Source of occupation titles and labor data is from the U.S. Bureau of Labor Statistics’ Occupational Outlook Handbook. Data comprises projected percent change in employment over the next 10 years; nation-wide employment numbers; and the yearly median wage at which half of the workers in the occupation earned more than that amount and half earned less.
Description
The Computed Tomography undergraduate certificate provides coursework in anatomy, patient management, procedures and image production. Students study computed tomography procedures, perform procedures under direct supervision of registered technologists and complete required clinical competencies toward the national certification exam for computed tomography or to be applied toward continuing education requirements as deemed by the American Registry of Radiologic Technologists (ARRT).

Computed technology (CT) scans are ordered on trauma, cancer and non-trauma patients and is often the first diagnostic imaging exam ordered on patients. A computed technologist works in hospitals or outpatient healthcare facilities using a CT scanner with an x-ray unit that rotates to image anatomy in the body as slices. The images are assembled and reconstructed digitally to create a series of diagnostic images that physicians use to interpret for a patient diagnosis.

The Computed Technology certificate offers a seamless transfer pathway into the Bachelor of Radiologic Imaging Sciences Technology (B.R.I.T.) degree. Students are able to complete the certificate, sit for the national certification exam, begin working in the profession and then enroll in the B.R.I.T. degree and complete the remaining requirements to earn the bachelor's degree.

Admission Requirements
Admission to this program is selective. Applicants must have graduated from a program in radiologic technology, diagnostic medical sonography, nuclear medicine or radiation therapy and be a registered or registry-eligible radiologic technologist, diagnostic medical sonographer, nuclear medicine technologist or a radiation therapist. Applicants must have a minimum 2.50 overall GPA prior to program entry.

The program begins in fall with an application deadline of July 1 each year.

Program Learning Outcomes
Graduates of this program will be able to:

1. Apply knowledge to the practice of computed tomography.
2. Effectively utilize critical thinking, problem-solving and decision-making skills in the practice of computed tomography.
3. Effectively communicate in oral and written form with patients, customers and all members of the health care team.
4. Successfully perform computed tomography procedures and attain results of high diagnostic value, while providing patient care.
5. Exhibit personal and professional attributes and values relevant to the practice of computed tomography.

Professional Licensure Disclosure
This program is designed to prepare students to sit for applicable licensure or certification in Ohio. If you plan to pursue licensure or certification in a state other than Ohio, please review state educational requirements for licensure or certification and contact information for state licensing boards at Kent State’s website for professional licensure disclosure.

**Description**

The Associate of Applied Science degree in Criminology and Justice Studies prepares graduates for para-professional positions in the field of criminal justice studies. The program can serve as a foundation for advanced study in several areas, including retail security, industrial security, forensics, law and corrections. Graduates typically seek employment in probation offices, social service agencies, courts, local law enforcement offices and crime labs.

The Criminology and Justice Studies major includes the following optional concentration:

- The Peace Officers Training Academy concentration is open only to students admitted to the Kent State Basic Police Academy. The coursework covers the basics of defensive tactics, firearms, driving, traffic, patrol, civil disorders and first aid. In addition, students learn investigative methods and the fundamentals of policing, the criminal justice system, constitutional law and homeland security.

Students may declare the Criminology and Justice Studies major without a concentration. That course of study is ideal for students interested in the structure, functions and issues within the criminal justice system, as well as those who want a pathway to complete Kent State’s B.A. degree in Criminology and Justice Studies.

Source of occupation titles and labor data is from the U.S. Bureau of Labor Statistics’ Occupational Outlook Handbook. Data comprises projected percent change in employment over the next 10 years; nation-wide employment numbers; and the yearly median wage at which half of the workers in the occupation earned more than that amount and half earned less.

Description
The Bachelor of Science degree in Engineering Technology focuses primarily on the applied aspects of science and engineering and prepares graduates for practice in that portion of the technological spectrum closest to product improvement, manufacturing, construction and engineering operational functions.

The Engineering Technology major comprises the following concentrations:

• The Electrical/Electronics concentration allows seamless articulation with technical associate degrees for students who wish to advance their careers in the electrical/electronic engineering field. Electrical engineers and technologists design, develop, test and supervise the manufacturing of electrical equipment, such as electric motors, radar and navigation systems, communications systems, and power generation equipment. Electronics engineers design and develop electronic equipment, such as broadcast and communications systems-from portable music players to global positioning systems (GPS).

• The Green and Alternative Energy concentration refers to energy sources that have no undesired consequences, for example, fossil fuels or nuclear energy. Alternative energy sources are renewable and are thought to be “free” energy sources. They all have lower carbon emissions, compared to conventional energy sources. These include biomass energy, wind energy, solar energy, geothermal energy, and hydroelectric energy sources. Combined with the use of recycling, the use of clean alternative energies such as the home use of solar power systems will help ensure man’s survival into the 21st century and beyond. By 2050, one-third of the world’s energy will need to come from solar, wind, and other renewable resources, according to British Petroleum and Royal Dutch Shell, two of the world’s largest oil companies.

• The Integrated Engineering Technology concentration permits graduates from a variety of associate degree backgrounds to formulate a program of advanced study in upper-division technical courses, chosen with a faculty advisor, to gain additional technical depth or breadth.

• The Mechanical/Systems concentration allows seamless articulation with technical associate degrees for students who wish to advance their careers in the mechanical or manufacturing field. Mechanical engineering technology is one of the broadest engineering disciplines. Mechanical engineers and technologists design, develop, build and test mechanical and thermal devices, including tools, engines and machines. Graduates of this program can expect to work mostly in engineering services, research and development, manufacturing industries, and the federal government.

Accreditation
The Bachelor of Science degree in Engineering Technology is accredited by the Engineering Technology Accreditation Commission of ABET, www.abet.org/.

Admission Requirements
The university affirmatively strives to provide educational opportunities and access to students with varied backgrounds, those with special talents and adult students who graduated from high school three or more years ago.
**First-Year Students on the Kent Campus:** First-year admission policy on the Kent Campus is selective. Admission decisions are based upon cumulative grade point average, strength of high school college preparatory curriculum and grade trends. Students not admissible to the Kent Campus may be administratively referred to one of the seven regional campuses to begin their college coursework. For more information, visit the admissions website for first-year students.

**First-Year Students on the Regional Campuses:** First-year admission to Kent State’s campuses at Ashtabula, East Liverpool, Geauga, Salem, Stark, Trumbull and Tuscarawas, as well as the Twinsburg Academic Center, is open to anyone with a high school diploma or its equivalent. Check with a regional campus admissions office to determine application requirements, as they may differ among campuses.

**International Students:** All international students must provide proof of English language proficiency (unless they meet specific exceptions) by earning a minimum 525 TOEFL score (71 on the Internet-based version), minimum 75 MELAB score, minimum 6.0 IELTS score, minimum 48 PTE score or minimum 100 DET score; or by completing the ESL level 112 Intensive Program. For more information, visit the admissions website for International Students.

**Transfer Students:** For more information, visit the admissions website for transfer students.

**Former Students:** Former Kent State students or graduates who have not attended another college or university since Kent State may complete the reenrollment or reinstatement form on the University Registrar's website.

**Program Learning Outcomes**

Graduates of this program will be able to:

1. Apply knowledge of mathematics, science and engineering to a variety of areas in the engineering technology fields.
2. Use modern engineering tools and techniques to design and test systems, components or processes in response to user requirements particularly in the engineering technology field.
3. Identify, analyze and solve broadly-defined engineering technology problems.
4. Function effectively as a member or leader on a multi-functional technical team.
5. Apply written, oral and graphical communication in both technical and non-technical environments; and an ability to identify and use appropriate technical literature.
6. Understand professional engineering and ethical responsibilities.
7. Understand contemporary issues and the impact of engineering technology solutions in a global/social context and a respect for diversity.
8. Commit to quality, timeliness and continuous improvement.
9. Understand the need for and an ability to engage in self-directed continuing professional development and lifelong learning.

**University Requirements**

All students in a bachelor’s degree program at Kent State University must complete the following university requirements for graduation.

**NOTE:** University requirements may be fulfilled in this program by specific course requirements. Please see Program Requirements for details.

Minimum Major GPA 2.000 Minimum Overall GPA 2.000

- Students may declare more than one concentration in the Engineering Technology major, provided that there are minimum 18 credit hours of upper-division coursework in the subsequent concentration. These credit hours must be in one of the Engineering Technology disciplines of EERT, ENGR, MERT, GAE. Students must also complete all of the other concentration requirements specific to each concentration, in addition to differentiating their major elective
courses across the two concentrations. Students who declare the Integrated Engineering Technology concentration may not elect any other concentration. Likewise, students who select any of the other Engineering Technology concentrations may not elect the Integrated Engineering Technology concentration.

- Students electing a dual concentration must meet with an advisor to plan an individualized plan of study that meets these requirements before the dual concentration option will be approved for that student. Any changes made to the program of study also must be approved by an advisor, or the student may not be allowed to graduate with this option.

Source of occupation titles and labor data is from the U.S. Bureau of Labor Statistics’ Occupational Outlook Handbook. Data comprises projected percent change in employment over the next 10 years; nation-wide employment numbers; and the yearly median wage at which half of the workers in the occupation earned more than that amount and half earned less.
Description

The Associate of Applied Science degree in Enology provides students with the foundational science knowledge, practical experience and technological skills of winemaking. The degree program emphasizes hands-on field experiences and laboratory practicum at local vineyards and wineries.

The A.A.S. degree in Enology is offered in consortium with the Viticulture and Enology Science and Technology Alliance (VESTA), a National Science Foundation-funded partnership between the Missouri State University system and colleges, universities, vineyards and wineries across the United States.

Admission Requirements

The university affirmatively strives to provide educational opportunities and access to students with varied backgrounds, those with special talents and adult students who graduated from high school three or more years ago.

Kent State campuses at Ashtabula, East Liverpool, Geauga, Salem, Stark, Trumbull and Tuscarawas, and the Twinsburg Academic Center, have open enrollment admission for students who hold a high school diploma, GED or equivalent.

For more information on admissions, contact the Regional Campuses admissions offices.

Program Learning Outcomes

Graduates of this program will be able to:

1. Produce wine according to commercial winemaking principles and practices, including performing calculations necessary for accurate, precise and safe additions to the wine.
2. Identify and safely use crush, storage, fermentation, transfer, sanitation, refrigeration and bottling equipment found in a winery.
3. Perform introductory microbiology methods for winery sanitation and bottle sterilization.
4. Properly handle and eliminate waste products from the winery with regard to environmental and safety regulations.
5. Identify the role of both good and bad microorganisms frequently encountered in the winemaking process, and implement appropriate measures to deal with each.
6. Acquire a beginning mastery of discerning flavors to establish tasting benchmarks by understanding the principles of sensory evaluation used in commercial winemaking.

University Requirements

All students in an applied or technical associate degree program at Kent State University must complete the following university requirements for graduation.

NOTE: University requirements may be fulfilled in this program by specific course requirements, please see Program Requirements for details.

Description
The Bachelor of Science degree in Insurance Studies provides students with the academic background for career entry in the insurance industry. The insurance studies degree program offers a well-rounded core of business and social science courses including management technology, professional writing, and human communications.

Building on this core curriculum are courses that provide the opportunity to explore all lines of insurance, including personal lines, commercial lines, life and health insurance. Students also take on an internship during their third year to reinforce their insurance industry knowledge and gain real-world experience.
The knowledge gained in the insurance program permits students to join any organization within the insurance industry with a solid understanding of applicable products, regulations, operations and policy contracts. Students graduate with knowledge of several specific insurance industry facets, such as property and casualty insurance, life and health insurance, insurance company and agency operations, insurance regulation, insurance finance and risk management.

Source of occupation titles and labor data is from the U.S. Bureau of Labor Statistics’ Occupational Outlook Handbook. Data comprises projected percent change in employment over the next 10 years; nation-wide employment numbers; and the yearly median wage at which half of the workers in the occupation earned more than that amount and half earned less.

### Description

The Magnetic Resonance Imaging undergraduate certificate program provides coursework in anatomy, patient management, procedures and image production. Students observe magnetic resonance imaging procedures, perform procedures under direct supervision by registered technologists and complete required clinical competencies toward the national certification exam for magnetic resonance imaging or to be applied toward continuing education requirements as deemed by the American Registry of Radiologic Technologists (ARRT).

Magnetic resonance imaging (MRI) scans are ordered on orthopedic, neurological, cardiovascular, cancer and non-trauma patients and is extremely beneficial for examining soft tissue structures. An MRI technologist works in hospitals or outpatient healthcare facilities using an MRI scanner that uses a magnetic field and computer-generated radio waves to create detailed images of the organs and tissues in the body. The images are assembled and reconstructed digitally to create a series of diagnostic images that physicians use to interpret for a patient diagnosis.

The Magnetic Resonance Imaging certificate offers a seamless transfer pathway into the Bachelor of Radiologic Imaging Sciences Technology degree. Students are able to complete the certificate, sit for the national certification exam, begin working in the profession and then enroll in the B.R.I.T. degree and complete the remaining requirements to earn the bachelor’s degree.

### Admission Requirements

Admission to this program is selective. Applicants must have graduated from a program in radiologic technology, diagnostic medical sonography, nuclear medicine or radiation therapy and be a registered or registry-eligible radiologic technologist, diagnostic medical sonographer, nuclear medicine technologist or a radiation therapist. Applicants must have a minimum 2.50 overall GPA prior to program entry.

The program begins in fall with an application deadline of July 1 each year.

### Program Learning Outcomes

Graduates of this program will be able to:

1. Apply knowledge to the practice of magnetic resonance imaging.
2. Effectively utilize critical thinking, problem-solving and decision-making skills in the practice of magnetic resonance imaging.
3. Effectively communicate in oral and written form with patients, customers and all members of the health care team.
4. Successfully perform magnetic resonance imaging procedures and attain results of high diagnostic value while providing patient care.
5. Exhibit personal and professional attributes and values relevant to the practice of magnetic resonance imaging.

**Professional Licensure Disclosure**

This program is designed to prepare students to sit for applicable licensure or certification in Ohio. If you plan to pursue licensure or certification in a state other than Ohio, please review state educational requirements for licensure or certification and contact information for state licensing boards at Kent State’s website for professional licensure disclosure.

Description
The Mammography undergraduate certificate program provides education and training in digital mammography. Mammography is specialized medical imaging that is critical to early detection and diagnosis of breast diseases in women. Technologists, also known as mammographers, are members of breast-imaging teams within health care organizations. Using low-dose x-rays, mammographers image breasts to help physicians look for or track the progress of cancer or benign growths and determine treatment. Mammographers work in hospitals, physician's offices and other healthcare facilities.

The Mammography certificate meets requirements set by the Mammography Quality Standards Act (MQSA) for minimum didactic and clinical standards for mammographers. Graduates of the certificate are eligible to earn certification in mammography from the American Registry of Radiologic Technologists (ARRT).

Admission Requirements
Admission to the Mammography certificate is selective. Applicants must be a registered radiologic technologist (RRT) or in their second year of an accredited radiologic technology degree program.

Program Learning Outcomes
Graduates of this program will be able to:

1. Effectively utilize critical thinking and problem-solving skills when performing mammographic procedures
2. Communicate effectively in oral and written form with patients, families and members of the health care team
3. Perform mammographic procedures successfully and consistently with entry-level requirements of a registered mammographer
4. Determine the value of professional growth and development and conduct themselves in a professional manner

Progression Requirements

To be able to register for physical therapist assistant technology (PTST) courses, students must be accepted to technical study. Acceptance to technical study is a selective process. Criteria for acceptance are the following:

• Completion of observation hours in a physical therapy clinic
• Minimum 2.700 overall GPA from the most recent academic experience of 12 credit hours or more
• Completion or placement out of all Kent State University prescribed developmental education coursework (ENG 01001 and READ 00006)
• Submission of application to technical study, separate from the university application
• Program Applicant Assessments as noted in the program application information packet for each cohort

Graduation Requirements

Minimum Major GPA 2.000
Minimum Overall GPA 2.000

• Minimum C (or S) grade may be required in some courses.
• Three practicum courses require students to complete a minimum of 640 off-campus clinical education hours under the supervision of a licensed physical therapist or physical therapist assistant. Under certain circumstances, students in practicum courses are required to attend clinicals on days outside of the academic calendar. These circumstances may occur on scheduled or unscheduled campus closures or on days when classes are cancelled. Examples include: certain holidays, spring recess, snow days and/or prior to the start of semesters. Students are notified in advance of the clinical education schedule.

• Contracted clinical education sites normally require students to demonstrate both medical and background clearances, as well as the ability to perform the core tasks and essential job functions of a physical therapist assistant. Students who are unable to perform the core tasks and essential job functions, or who cannot demonstrate medical and background clearance may not be able to complete the requirements for the degree program.

**Description**

The Bachelor of Radiologic and Imaging Sciences Technology degree is designed for students pursuing studies related to medical imaging. Job opportunities for CT and MRI technologists, sonographers and therapists exist in hospitals, surgical centers, clinics, physician offices and other healthcare facilities.

The Radiologic and Imaging Sciences major comprising the following concentrations:

- The **Computed Tomography** concentration uses specialized x-ray equipment to create sectional images of the human body. Each cross-sectional image reveals complex information about body structures that are used for a variety of reasons (i.e., diagnostic, treatment planning, interventional or screening).
- The **Computed Tomography concentration** for students who completed an A.A.S. degree in Radiologic Technology, Nuclear Medicine or Radiation Therapy
- The **Computed Tomography concentration** for students who completed a hospital-based certificate or A.T.S. degree in Radiologic Technology and American Registry of Radiologic Technologist certification examination

- The **Diagnostic Medical Sonography** concentration uses medical ultrasound (high frequency sound waves that produce images of internal structures) to diagnose a variety of conditions and diseases, as well as monitor fetal development.
- **Diagnostic Medical Sonography concentration** for new students (freshmen) and students who completed an associate degree
- **Diagnostic Medical Sonography concentration** for students who completed an A.A.S. degree in Radiologic Technology
- **Diagnostic Medical Sonography concentration** for students who completed a hospital-based certificate or A.T.S. degree in Radiologic Technology and American Registry of Radiologic Technologist certification examination

- The **Magnetic Resonance Imaging** concentration uses a powerful magnet, radio waves, and computers to create sectional images of the human body. The images reveal complex information about body structures and the chemical changes that occur as a result of the onset of disease.
- **Magnetic Resonance Imaging concentration** for students who completed an A.A.S. degree in Radiologic Technology, Nuclear Medicine or Radiation Therapy
- **Magnetic Resonance Imaging concentration** for students who completed a hospital-based certificate or A.T.S. degree in Radiologic Technology and American Registry of Radiologic Technologist certification examination

- The **Radiation Therapy** concentration uses specialized high energy treatment units to administer therapeutic doses of radiation to cancer patients.
- **Radiation Therapy concentration** for new students (freshmen) and students who completed an associate degree
- **Radiation Therapy concentration** for students who completed an A.A.S. degree in Radiologic Technology
- **Radiation Therapy concentration** for students who completed a hospital-based certificate or A.T.S. degree in Radiologic Technology and American Registry of Radiologic Technologist certification examination

**Accreditation**

The B.R.I.T. degree in Radiologic Imaging Sciences (Radiation Therapy concentration only) is accredited by the Joint Review Committee on Education in Radiologic Technology.

**Admission Requirements**

The university affirmatively strives to provide educational opportunities and access to students with varied backgrounds, those with special talents and adult students who graduated from high school three or more years ago.

**First-Year Students on the Kent Campus:** First-year admission policy on the Kent Campus is selective. Admission decisions are based upon cumulative grade point average, strength of high school college...
preparatory curriculum and grade trends. Students not admissible to the Kent Campus may be administratively referred to one of the seven regional campus to begin their college coursework. For more information, visit the admissions website for first-year students.

First-Year Students on the Regional Campuses: First-year admission to Kent State’s campuses at Ashtabula, East Liverpool, Geauga, Salem, Stark, Trumbull and Tuscarawas, as well as the Twinsburg Academic Center, is open to anyone with a high school diploma or its equivalent. *Note
Source of occupation titles and labor data is from the U.S. Bureau of Labor Statistics’ Occupational Outlook Handbook. Data comprises projected percent change in employment over the next 10 years; nation-wide employment numbers; and the yearly median wage at which half of the workers in the occupation earned more than that amount and half earned less.

Description
The Associate of Applied Science degree in Radiologic Technology educates students on how to perform diagnostic imaging procedures. Medical imaging is a branch of health care delivery that utilizes x-rays and other energy forms to aid in the diagnosis and treatment of medical conditions. Through a blend of classroom education at the university and clinical education at a hospital, students learn anatomy, patient positioning, examination techniques, radiation safety, basic patient care and imaging equipment operation.

Graduates are eligible to take the certification examination administered by the American Registry of Radiologic Technologists (ARRT) to become registered radiologic technologists.

Accreditation
The A.A.S. degree in Radiologic Technology is accredited by the Joint Review Committee on Education in Radiologic Technology (JRCERT).

Admission Requirements
The university affirmatively strives to provide educational opportunities and access to students with varied backgrounds, those with special talents and adult students who graduated from high school three or more years ago.

Kent State campuses at Ashtabula, East Liverpool, Geauga, Salem, Stark, Trumbull and Tuscarawas, and the Twinsburg Academic Center, have open enrollment admission for students who hold a high school diploma, GED or equivalent.

For more information on admissions, contact the Regional Campuses admissions offices.

Program Learning Outcomes
Graduates of this program will be able to:

1. Utilize critical thinking and problem-solving skills effectively in the practice of radiologic technology.
2. Communicate effectively in oral and written form with patients’ families and members of the health care team.
3. Perform radiographic procedures successfully and consistently with entry-level requirements of a registered radiologic technologist.
4. Determine the value of professional growth and development and to conduct themselves in a professional manner.

Professional Licensure Disclosure
This program is designed to prepare students to sit for applicable licensure or certification in Ohio. If you plan to pursue licensure or certification in a state other than Ohio, please review state educational requirements for licensure or certification and contact information for state licensing boards at Kent State’s website for professional licensure disclosure.

University Requirements
All students in an applied or technical associate degree program at Kent State University must complete the following university requirements for graduation.

NOTE: University requirements may be fulfilled in this program by specific course requirements, please see Program Requirements for details.

Description
The Associate of Applied Science degree in Respiratory Therapy Technology provides students the skills to evaluate, treat and care for patients with breathing or other cardiopulmonary disorders. Practicing under the direction of a physician, respiratory therapists assume primary responsibility for all respiratory care therapeutic treatments and diagnostic procedures. Respiratory therapists also provide complex therapy requiring considerable independent judgment, such as caring for patients on life support in intensive-care units of hospitals.

Graduates of the program are eligible to take national credentialing examinations administered by the National Board for Respiratory Care to become Certified and Registered Respiratory Therapists (CRT, RRT), Certified and Registered Pulmonary Function Technologists (CPFT, RPFT) and Neonatal Pediatric Specialist (NPS).

Accreditation
For Ashtabula: The A.A.S. degree in Respiratory Therapy Technology program at Kent State University at Ashtabula located in Ashtabula, OH, program number 200574, is accredited by the Commission on Accreditation for Respiratory Care (www.coarc.com).

For Cleveland Clinic: The Kent State University Respiratory Therapy Technology program, CoARC program number 300037, Associate of Applied Science degree at Cleveland Clinic holds Provisional Accreditation from the Commission on Accreditation for Respiratory Care (www.coarc.com).

Admission Requirements
The Respiratory Therapy Technology major is cohort-based, with students admitted in the spring semester only. Spring admission is limited to 20
students at the Ashtabula Campus and 10 students at the Cleveland Clinic location.

The university affirmatively strives to provide educational opportunities and access to students with varied backgrounds, those with special talents and adult students who graduated from high school three or more years ago.

Kent State campuses at Ashtabula, East Liverpool, Geauga, Salem, Stark, Trumbull and Tuscarawas, and the Twinsburg Academic Center have open enrollment admission for students who hold a high school diploma, GED or equivalent.

For more information on admissions, contact the Regional Campuses admissions offices.

Program Learning Outcomes
Graduates of this program will be able to:

1. Demonstrate knowledge of respiratory care principles, current theories and practices required of registered respiratory therapists as defined by the National Board of Respiratory Care (NBRC)
2. Exhibit, professionally and fluently, technical skills and procedures utilized in current practice by registered respiratory therapists
3. Express personal professional ethics and behaviors expected of registered respiratory therapists in practice to obtain and maintain a positive impact in patient care and inter-staff relations

Description

The Software Development minor is designed to complement a wide range of majors. The curriculum focuses on visual basic, scripting and programming mobile devices. Electives provide flexibility to tailor the minor to each student’s interests and career goals. For example, a student might choose a different programming language or a more in-depth course in scripting, visual basic or data design.

Admission Requirements

Admission to a minor is open to students declared in a bachelor’s degree, the A.A.B. or A.A.S. degree or the A.T.S. degree (not Individualized Program major). Students declared only in the A.A. or A.S. degree or the A.T.S. degree in Individualized Program may not declare a minor. Students may not pursue a minor and a major in the same discipline.

Description

The Bachelor of Technical and Applied Studies degree is a completer program designed for students with an associate degree or some college-level coursework who wish to matriculate into a bachelor’s degree. The program accommodates varied educational backgrounds, develops
competencies needed for success in a variety of work settings and offers flexibility and scheduling attractive to working students and to time- and place-bound adults.

The B.T.A.S. degree integrates the practical application of technical skills and knowledge with the professional skills instilled in a bachelor’s degree program. Students focus on career paths in technical and applied areas of specializations, leading to breadth and depth in a particular discipline.

The program provides a foundation for further graduate education and benefits students who need additional workplace and professional skills beyond their technical education with hands-on learning, experiential learning opportunities, internships and research projects. Employers are searching for professionals with a combination of technical expertise and business soft skills; this program provides the knowledge, skills and experiences necessary to transition from student to professional.

Many associate degree programs at Kent State University align well with the B.T.A.S. degree.

**Admission Requirements**

The university affirmatively strives to provide educational opportunities and access to students with varied backgrounds, those with special talents and adult students who graduated from high school three or more years ago.

Students who wish to declare the B.T.A.S. degree must meet with an academic advisor prior to admission or changing their major to discuss their future academic and career goals and to develop an approved program of study. Ideally, students should begin the process for evaluation and program review at or near the time they have a minimum of 12 earned credit hours of college-level coursework.

**English Language Proficiency Requirements for International Students:**

All international students must provide proof of English language proficiency (unless they meet specific exceptions) by earning a minimum 525 TOEFL score (71 on the Internet-based version), minimum 75 MELAB score, minimum 6.0 IELTS score, minimum 48 PTE score or minimum 100 DET score; or by completing the ESL level 112 Intensive Program. For more information on international admission, visit the Office of Global Education’s admission website.

**Program Learning Outcomes**

Graduates of this program will be able to:

1. Interpret and communicate discipline specific information via written, verbal and/or visual or digital representations
2. Demonstrate effective written, oral and digital communication skills in multiple contexts, for a variety of audiences
3. Demonstrate application and evidence of skills and knowledge via presentation of artifacts in an electronic portfolio
4. Analyze ethical issues in the context of the profession or discipline to produce reasoned evaluations and solutions
5. Integrate applied skills and theoretical knowledge in a specific technical field with opportunities for experiential learning in a workplace environment
6. Develop self-awareness about identity and culture, diversity, sensitivity and respect for differences

**University Requirements**

All students in a bachelor’s degree program at Kent State University must complete the following university requirements for graduation.

1 The internship or practicum allows students to gain workplace skills and real-world experience in their chosen field. Students with prior work, internship, practicum, student teaching and/or field experience may be waived the internship/practicum requirement with approval by the program coordinator.

2 In TAS 37900, students construct a meaningful career management plan to explore and prepare for their preferred professional goals.

3 TAS 47999, taken near the end of the program, synthesizes learning and focuses on foundational competencies in the form of service or experiential learning, a discipline-specific research project and the development of an academic/career e-portfolio. A minimum C grade must be earned to fulfill the writing-intensive requirement.

4 In collaboration with an advisor, students develop a plan of study for two to three specializations that draw on transferred, completed and available Kent State coursework. Students select from a flexible and robust core of skills- and knowledge-based courses - bridging multiple disciplines - to develop a tailored option to best benefit and further professional goals. A faculty member approves the student’s specializations to ensure they meet the student’s needs. Two of the three specialization areas may be from the same discipline. One specialization must be distinct.

Source of occupation titles and labor data is from the U.S. Bureau of Labor Statistics’ Occupational Outlook Handbook. Description
The Bachelor of Arts degree in Architectural Studies is a liberal arts program that exposes students to the theory and processes of design and prepares them for directed graduate study and careers in a variety of design-related disciplines.

As the only liberal arts degree in Kent State’s College of Architecture and Environmental Design, the Architectural Studies major allows students to pursue dual degrees, double majors and/or multiple minors in related fields such as art history, business, construction management, fashion, geography, history, marketing, music, physical/life sciences, studio arts, urban studies, visual communications design and others. The program includes required design studios; lecture/studio hybrid courses; and seminars on architectural history, theory/criticism, urban issues and theories of sustainability. Additionally, students take architecture electives, which allow them to explore digital design processes, landscape architecture and urban design, or to pursue a minor in architectural history or historic preservation.

Students have the option of graduating with a streamlined dual degree, the B.A. degree in Architectural Studies and the B.S. degree in Construction Management.

Students may take advantage of the semester-long study abroad program in Florence, Italy, in any semester after successful completion of at least 6 credit hours of Architectural Studies (ARCS) coursework and 30 hours total at Kent State University. This program is open to all students who have made satisfactory progress toward completion of their undergraduate program. While in Florence, students may take design studios, electives, foreign language courses in Italian and/or courses that may count towards a minor.

Admission Requirements
The university affirmatively strives to provide educational opportunities and access to students with varied backgrounds, those with special talents and adult students who graduated from high school three or more years ago.

First-Year Students on the Kent Campus: First-year admission policy on the Kent Campus is selective. Admission decisions are based upon cumulative grade point average, strength of high school college preparatory curriculum and grade trends. Students not admissible to the Kent Campus may be administratively referred to one of the seven regional campus to begin their college coursework. For more information, visit the admissions website for first-year students.

First-Year Students on the Regional Campuses: First-year admission to Kent State’s campuses at Ashtabula, East Liverpool, Geauga, Salem, Stark, Trumbull and Tuscarawas, as well as the Twinsburg Academic Center, is open to anyone with a high school diploma or its equivalent. Check with a regional campus admissions office to determine application requirements, as they may differ among campuses.

International Students: All international students must provide proof of English language proficiency (unless they meet specific exceptions) by earning a minimum 525 TOEFL score (71 on the Internet-based version), minimum 75 MELAB score, minimum 6.0 IELTS score, minimum 48 PTE score or minimum 100 DET score; or by completing the ESL level 112 Intensive Program. For more information, visit the admissions website for international students.

Transfer Students: For more information, visit the admissions website for transfer students.

Former Students: Former Kent State students or graduates who have not attended another college or university since Kent State may complete the reenrollment or reinstatement form on the University Registrar’s website.

**Description**
The Bachelor of Science degree in Architecture enables students to learn, develop and apply knowledge that contributes to the betterment of the built environment. The balanced curriculum of technology, visualization, history, theory and design studio coursework offers a platform for research, constructive discourse and debate.

Northeast Ohio's rich history and dynamic urban landscape serve as a setting for academic learning. By placing equal emphasis on the art and science of architectural design, the curriculum inspires experimentation, collaboration, discovery, critical thinking and innovation in a studio context of project-based learning. The program fosters academic excellence and prepares students to become leaders in the architecture field.

The college offers full-semester programs abroad for qualified third-year students. The study abroad program is housed in the heart of historic Florence, Italy. The program is open to all students who have made satisfactory progress toward completion of their undergraduate program.

**Admission Requirements**
The university affirmatively strives to provide educational opportunities and access to students with varied backgrounds, those with special talents and adult students who graduated from high school three or more years ago.

First Year Students: Admission to the Architecture major is highly selective. Of the students who apply each year, approximately 100 are enrolled in the program. Of the remaining applicants, approximately 50 are selected as alternates. Should additional space become available prior to the beginning of fall semester, spaces will be filled from the roster of alternates.

To be considered for admission, students need a minimum 3.000 high school grade point average (on a 4.000 scale) and a minimum ACT 25 composite score (minimum ACT 25 subscores in both English and mathematics) or a minimum SAT 1200 total with minimum 600 subscores of in both mathematics and evidence-based reading and writing.

The application deadline is Jan. 31. All applications must include the application fee, official ACT/SAT scores and an official high school transcript that shows class rank and coursework in 9th, 10th and 11th grades, as well as the courses that are being taken or will be taken in the senior year. Transcripts that do not show class rank and senior courses cannot be considered. All completed applications received by the deadline will be reviewed.

Applicants will be notified of their admission status by March 1. Those offered admission to the architecture program must notify the college.
of their decision by April 1. Admission not confirmed by this date will be offered to alternates.

Applicants with a non-professional bachelor’s degree or a pre-professional degree from another institution will have their prior education evaluated to determine if they meet student performance criteria as stipulated by the National Architectural Accrediting Board (NAAB). If deficient criteria or courses are recognized, the student may be required to complete additional courses to earn the degree. Determinations will be made by the program director and graduate coordinator at the time the student is admitted to the program.

Admission to Non-Degree General major: Students not admitted to the Architecture major may qualify for admission to the college’s non-degree General major. Students in the General major are assigned to freshman orientation classes with students in all College of Architecture and Environmental Design majors. These classes aid in understanding the broad range of career options within the environmental design professions. Students should take regular coursework in preparation to attempt entry into one of the College of Architecture and Environmental Design majors or may consider alternative degree program options. Students should meet with their advisor to aid in making a decision regarding their degree program and major. In order to move forward with a minimum loss of credit hours, it is strongly recommended that students in the General, who were not accepted into a degree program, choose an alternate degree program within or outside the college prior to completing 45 credit hours.

Students in the General major may apply for admission to the architecture Spring/Summer studio programs. To be eligible for consideration, they must complete their first semester (or first-year) with a minimum 2.750 GPA (3.000 GPA or higher are the most competitive), complete first-year non-studio requirements and apply for the summer studio program. Students who are accepted will complete ARCH 10101 and ARCH 10102 during the Spring/Summer between their first and second years. A personal interview with the program director is recommended during the first week of the spring semester of their first year.

Transfer, Transitioning and Former Students: For more information about admission criteria for transfer, transitioning and former students, please visit the admissions website.

English Language Proficiency Requirements for International Students: All international students must provide proof of English language proficiency (unless they meet specific exceptions) by earning a minimum 525 TOEFL score (71 on the Internet-based version), minimum 75 MELAB score, minimum 6.0 IELTS score, minimum 48 PTE score or minimum 100 DET score; or by completing the ESL level 112 Intensive Program. For more information on international admission, visit the Office of Global Education’s admission website.

Program Learning Outcomes
Graduates of this program will be able to:

1. Demonstrate the fundamentals of visual perception and the principles of two and three-dimensional form and space making.
2. Demonstrate comprehensive design studio experiences through which graduates apply an understanding of the integration of building design, site design, assemblies, structure, environmental systems and building code requirements.
3. Demonstrate an understanding of building systems and their integration for human comfort, including lighting, heating ventilation and acoustics.

Description
The Master of Architecture degree seeks to prepare graduates to lead in the field of architecture by stimulating the growth of technical knowledge and design creativity. The program fosters the refinement of design skills acquired in undergraduate programs. Master coursework affords opportunities for inquiry in architecture through the introduction of traditional scholarly research methods as well as approaches to research through design in a studio setting. Professional practice courses are paired with theory seminars and elective classes in areas of digital technology, building sciences and history to provide a comprehensive exposure to professional opportunities and a broad capacity for considering and postulating architecture in innovative ways.

Students may also pursue a dual degree program with the Master of Business Administration degree or with the Master of Urban Design degree.

Accreditation
The M.Arch degree in Architecture is accredited by the National Architectural Accrediting Board (NAAB).

1 Elective credits may be taken from the offerings in the College of Architecture and Environmental Design, or from other Kent State colleges, schools or departments or from at the Levin College of Urban Affairs at Cleveland State University.

Graduation Requirements
Time to completion for the degree typically is one to two years for students with an accredited pre-professional undergraduate degree in architecture. Students admitted without a pre-professional degree may be required to take additional courses, in addition to the requirements for the
degree, to meet NAAB student performance criteria. Therefore, time for graduation may be three years with more than the listed credit hours.

**Dual Degree with M.B.A. degree in Business Administration**

Students have the opportunity to complete a dual degree program with the M.Arch. degree in Architecture and the M.B.A. degree in Business Administration. A separate application must be submitted for each program. Students can view admission requirements for each program on their respective catalog page.

The dual degree combining a Master of Architecture (M.Arch.) with a Master of Business Administration (M.B.A.) is designed for architects or undergraduate architectural students who aspire to middle or executive management positions in architectural practices, or who are interested in starting their own business along with the preparation to enter the profession of architecture by stimulating the growth of technical knowledge and design creativity. It fosters the refinement of design skills acquired in undergraduate programs, also by offering a broad exposure to professional issues and knowledge.

Description

The Bachelor of Science degree in Construction Management employs a professional-service approach that applies effective management techniques and oversight to the building and management of construction projects. Students learn the business of construction from inception to completion of a project—including emphasis on construction materials and methods—that will enable them to estimate costs, schedule work, oversee construction work-site activities and manage projects.

The Construction Management major includes the following optional concentrations:

- Civil Management concentration offers students an opportunity to further explore civil construction estimating functions, utility systems, soils, and subcontractor leadership. Focusing on the critical systems that are needed on all projects, this concentration will provide construction managers with the tools to navigate civil construction on any project.
- Mechanical and Electrical Management concentration offers students expertise in mechanical systems. By exposing students to sustainable building technologies, specific mechanical and electrical estimating, BIM, and leadership this concentration sets students apart in knowledge base and experience. Construction Managers are more effective with an in-depth understanding of critical MEP systems.
- Safety Management concentration is for those wishing to pursue a career in safety and/or construction managers looking to expand their knowledge in safety-related to construction. Students will take advanced OSHA and safety course while exposing them to insurance and workman’s compensation laws and procedures. Safety is the #1 priority of project management teams, and this concentration looks to provide future leaders with the tools to lead a safe job site.

Cooperative education opportunities are available to students in construction companies and architect/engineering firms in the region. In addition, students have an opportunity to pursue a dual degree with the B.A. degree in Architectural Studies.

Twelve credit hours of electives (from a total of 15 credit hours of electives) must be taken from the CAED, with at least nine credit hours from the CM Program. Three credit hours of non-Construction Management electives, taken in the CAED must be with special approval. The three remaining credit hours of electives can be taken outside of the CAED, but if taken within the CAED, special approval will also apply.

Accreditation

The B.S. degree in Construction Management is accredited by the American Council for Construction Education (ACCE).

Description
The Master of Healthcare Design degree is a post-professional degree and one of the very few in the country focusing on the design of healthcare facilities. The MHCD program equips students with the knowledge and skills required to design spaces that are conducive to safety, satisfaction, and efficiency for all end users, including patients, staff, and caregivers. The MHCD program is also designed for those professionals who want to have a deeper understanding of not just healthcare design, but of other drivers of healthcare innovations such as public policy, reimbursement, emerging technologies and what patient-centered care really means from the perspective of patients and families.

Upon graduation, our alumni are employed in healthcare-focused architecture and design firms. Kent State University’s Healthcare Design program is also a member of the AIA’s Design & Health Research Consortium.

Program curriculum is diverse by complementing required courses with electives from Colleges of Public Health, Nursing, and beyond. Connecting with professionals in the field is one of the core missions of the program, expanding students’ network and exposure to real-world projects.

To earn the degree, students must complete a master’s project by designing a healthcare environment of their choice. Students will develop research-based design guidelines for their individual projects to guide their designs. The program takes one and a half or two years to complete, depending on course load.

*Note
Source of occupation titles and labor data is from the U.S. Bureau of Labor Statistics’ Occupational Outlook Handbook. Data comprises projected percent change in employment over the next 10 years; nation-wide employment numbers; and the yearly median wage at which half of the workers in the occupation earned more than that amount and half earned less.

Description
The Bachelor of Arts in Interior Design degree seeks to exemplify design excellence, make interior spaces for human well-being and to continually expand the reputation and rigor of the program. The program educates highly skilled and empathetic interior designers through a diverse curriculum that emphasizes research, creativity, professionalism and leadership in an era of social and technological change. Competencies achieved in the program include fundamental design skills tempered with the application of research and creative inquiry; knowledge of materials, methods and systems; space planning and programming; professional practice knowledge and critical thinking; gaining experiences through a guided internship; inquiry into human factors in design; and the comprehensive designing of interior spaces with vigilance toward the health, safety and welfare of the public.

The college offers a semester abroad for qualified third-year students in the Interior Design major. The study abroad program is housed in the heart of historic Florence, Italy. The program is open to all students who have made satisfactory progress toward completion of their undergraduate program.

Interior Design students may apply early to the Master of Healthcare Design degree and double count 9 credit hours of graduate courses toward both degree programs. See the Combined Bachelor’s/Master’s Degree Program policy in the University Catalog for more information.

Accreditation
The B.A. degree in Interior Design is accredited by the Council for Interior Design Accreditation (CIDA) and the National Association of Schools of Art and Design (NASAD).

The CIDA-accredited program prepares students for entry-level interior design practice, for advanced study and to apply to membership in professional interior design organizations. The program meets the educational requirements for eligibility to sit for the National Council for Interior Design Qualification Examination (NCIDQ Exam).

Admission Requirements
The university affirmatively strives to provide educational opportunities and access to students with varied backgrounds, those with special talents and adult students who graduated from high school three or more years ago.

Freshmen Students: There is open admission to the Interior Design major, but early application is advised. For direct admission, students must have a minimum 2.75 overall high school GPA and a minimum 22 ACT composite score or a minimum 1100 SAT total score.

Admission to Non-Degree General major: Students who do not qualify for admission to the Interior Design major may qualify for admissions to the college’s non-degree General major. Students in the General major are assigned to freshman orientation classes with all College of Architecture and Environmental Design majors. These classes aid in understanding the broad range of career options within the environmental design professions. Students should take regular coursework in preparation to attempt entry into one of the College of Architecture and Environmental Design majors or may consider alternative degree program options. Students should meet with their advisors to aid in making decisions regarding their degree program and major. In order to move forward with a minimum loss of credit hours, students are strongly recommended to choose an alternate degree program within or outside the college prior to completing 45 credit hours.

Transfer, Transitioning and Former Students: For more information about admission criteria for transfer, transitioning and former students, please visit the admissions website.

English Language Proficiency Requirements for International Students: All international students must provide proof of English language proficiency (unless they meet specific exceptions) by earning a minimum 525 TOEFL score (71 on the Internet-based version), minimum 75 MELAB score, minimum 6.0 IELTS score, minimum 48 PTE score or minimum 100 DET score; or by completing the ESL level 112 Intensive Program. For more information on international admission, visit the Office of Global Education’s admission website.

Program Learning Outcomes
Graduates of this program will be able to:

1. Understand the foundations of the interior design discipline: history, theories of design, technical knowledge, human factors, human sciences, design thinking and professional practices.
2. Understand the complex relationships between design practice, materials, technology, sustainability and social issues in the built environment.
3. Conduct and apply technical, historical, material and cultural research, using quantitative and qualitative methods to design projects.
4. Understand how a variety of building materials, finishes and systems are used, assembled and interconnected in construction.
5. Skillfully manipulate two- and three-dimensional representational techniques using a wide range of media.
6. Demonstrate effective visual, verbal and written communication skills.
7. Contribute effectively to multidisciplinary, diverse teams prepared to practice in complex, multicultural global contexts.
8. Create interior spaces at varying scales, in various contexts and for varying purposes, using research, critical thinking, analysis and problem solving, which respond to user needs and promote human well-being.
9. Create interior spaces that conform with required codes, standards and regulations to protect the life, safety, health and wellness of the building occupants.

10. Develop an ethical bearing that addresses sustainability, social justice, leadership, responsibility to clients and society and respect for difference and equity.

Source of occupation titles and labor data is from the U.S. Bureau of Labor Statistics' Occupational Outlook Handbook. Data comprises projected percent change in employment over the next 10 years; nation-wide employment numbers; and the yearly median wage at which half of the workers in the occupation earned more than that amount and half earned less.

Description
The Master of Urban Design degree expands on traditional architectural, landscape architecture and planning education with an understanding of the processes of urban development, and with the skills required to the physical shaping of urban places. The degree seeks to develop knowledgeable specialists who possess significant ability to identify opportunities in the urban environment and the sensibility to provide for design solutions to the most complex problems encountered.

Faculty work in close collaboration with students through rigorous curricula focused on the application of research in the design of layered and mutually reinforcing systems and public spaces.

Projects range from neighborhood plans to large scale urban and regional initiatives engaging cultural and environmental concerns. Project locations are often in Cleveland and similar regional cities, but they address far-reaching global concerns. Students can engage in applied research in the re-design of "Cities Growing Smaller," systemic approaches to the development of urban environments, considerations of place and identity and the place-making potential of infrastructure. Further directions include the design of cities and neighborhoods that promote physical and mental health, studies of sustainable infrastructures that support sustainable ecological systems, the adaptation of traditional models of urbanism to changing conditions, and the future of urban economies as it relates to physical place-making.

Program Learning Outcomes
Graduates of this program will be able to:

- Demonstrate the ability to build abstract relationships and understand the impact of ideas based on research and analysis of multiple theoretical, social, political, economic, cultural and environmental contexts. This includes the wider range of media used to think about urban and regional design, including writing, investigative skills, speaking, drawing and model making.
- Develop an ability to utilize the technical instruments of the urban design field including: legal instruments, urban systems and their organization, the role of these varied elements in the implementation of design and their impact on the environment. This is inclusive of understanding and abilities at a range of scales from local to regional
design and the implications of policy and design decision making at these ranges of scale.

- Manage, advocate and act legally, ethically and critically for the good of society and the public. This includes collaborative, professional and leadership skills, especially in the public arena.

**Mission of the College**

It is the mission of the College of Arts and Sciences to deliver a first-rate education dedicated to the traditions and values of the liberal arts. These traditions include developing the skills of critical reasoning, writing, reading and deduction and providing a firm grounding in the theories and methodologies of the humanities, social and natural sciences and mathematics. These values include a commitment to rigorous questioning of principles and practices, intellectual integrity, community responsibility and diversity of perspectives in the pursuit of truth and social justice. Fundamental to a liberal education is the acquisition, preservation and transmission of new ideas and knowledge.

Study within the College of Arts and Sciences broadens and enriches students’ intellectual and cultural background. The college provides a core curriculum for all students whatever their major fields or career goals. With specialized and interdisciplinary programs at the undergraduate and graduate levels, the college strives to offer a wide variety of learning and research opportunities to its students, guided by nationally and internationally renowned faculty — faculty as passionate and intent on adding to human understanding as they are to passing this understanding on to future generations. The liberal arts provide both a rich variety of fields of academic specialization and a vital base for professional, creative and technological study.
Students pursuing degrees in the College of Arts and Sciences are introduced to a variety of disciplinary and intellectual perspectives through the college's General Requirements. These requirements provide a solid foundation in essential communications skills and mathematics; a strong and varied background in the humanities, the social sciences and the natural sciences; and, for most students, study of a foreign language as a tool for approaching another culture. These requirements thus supply a broad acquaintance with the traditional liberal arts and a firm basis for more specialized study.

All students in the college select at least one area of academic specialization (major). This area of specialization may be within one of the traditional disciplines, it may be interdisciplinary or it may be self-designed. Students may also pursue a second major area or one or more minor areas of specialization.

In addition to general requirements and the specific requirements within the areas of specialization, students have elective credit hours that may be used to pursue secondary areas of specialization, to explore areas of general interest or to take additional coursework within the area of specialization or in related areas. Elective coursework in the liberal arts provides not only a sound basis for more specialized learning but also intellectual enrichment that is of lasting value to any student in the university.

Study in the liberal arts provides a basis for success in a wide variety of careers. In addition to preparing students for later professional study, it provides communication skills, analytical tools and mental flexibility necessary for success in adapting to changing careers in a changing world. Above all, study in the liberal arts prepares students for a lifetime of learning experiences and for personal and intellectual as well as professional growth.

Foreign Language College Requirement, B.A.
Students pursuing the Bachelor of Arts degree in the College of Arts and Sciences must complete 14-16 credit hours of foreign language. To complete the requirement, students need the equivalent of Elementary I and II in any language, plus one of the following options:

1. Intermediate I and II of the same language
2. Elementary I and II of a second language
3. Any combination of two courses from the following list:
   • Intermediate I of the same language
   • ARAB 21401
   • ASL 19401
   • CHIN 25421
   • MCLS 10001
   • MCLS 20001
   • MCLS 20091
   • MCLS 21417
   • MCLS 21420
   • MCLS 22217
   • MCLS 28403
   • MCLS 28404

1 All students with prior foreign language experience should take the foreign language placement test to determine the appropriate level at which to start. Some students may start beyond the Elementary I level and will complete the requirement with fewer credit hours and fewer courses. This may be accomplished by (1) passing a course beyond Elementary I through Intermediate II level; (2) receiving credit through one of the alternative credit programs offered by Kent State University; or (3) demonstrating language proficiency comparable to Elementary II of a foreign language. When students complete the requirement with fewer than 14 credit hours and four courses, they will complete remaining credit hours with general electives.

2 Certain majors, concentrations and minors may require specific languages, limit the languages from which a student may choose or require coursework through Intermediate II. Students who plan to pursue graduate study may need particular language coursework.
Foreign Language College Requirement, B.S.

- Students pursuing the Bachelor of Science degree in the College of Arts and Sciences must complete 8 credit hours of foreign language.¹
- Minimum Elementary I and II of the same language

¹ All students with prior foreign language experience should take the foreign language placement test to determine the appropriate level at which to start. Some students may start beyond the Elementary I level and will complete the requirement with fewer credit hours and fewer courses. This may be accomplished by (1) passing a course beyond Elementary I through Intermediate II level; (2) receiving credit through one of the alternative credit programs offered by Kent State University; or (3) demonstrating language proficiency comparable to Elementary II of a foreign language. When students complete the requirement with fewer than 8 credit hours and two courses, they will complete remaining credit hours with general electives.

Foreign Language Requirements

In general, students may elect any foreign language taught through the Department of Modern and Classical Language Studies or the Department of Pan-African Studies. However, certain majors, fields of concentration and minors require specific languages or limit the languages from which students may choose. In addition, students who plan to pursue graduate study may need particular languages for that study. In such cases, the students should seek the advice of the appropriate department before selecting a language.

The Department of Modern and Classical Language Studies offers courses of study beyond the minimum needed to meet the foreign language requirement in Arabic, Chinese, Greek (classical), Italian and Japanese; however no major is available for them at this time.

Progress Toward Fulfillment

Arts and sciences students are required to begin meeting the foreign language requirement by their third semester of full-time enrollment (that is, no later than upon completing 30 credit hours) and are required to continue to enroll for foreign language courses until the requirement has been completed. Students who transfer to the College of Arts and Sciences from other universities or from other programs at Kent State University with sophomore status are required to begin meeting the foreign language requirement by their second semester of full-time enrollment in the college and must continue to enroll for foreign language courses until the requirement has been completed. Students who fail to meet these stipulations risk unnecessary delays in the completion of their degree programs. The stipulation that arts and sciences students begin meeting the foreign language requirement by their third semester of full-time study applies not only to students with declared majors but also to undeclared students. This includes those students seeking admission to selective programs in other colleges who do not achieve admission to the selective program at the time they achieve sophomore status.

Limitations on Applicability of Credits

The following policies impose restrictions on the applicability of credit earned in certain categories of coursework toward meeting graduation requirements for arts and sciences students. Credit hours restricted under these policies will not be counted toward the 120 total credit hours or 42 upper-division credit hours graduation requirements.

Variable Title Courses

Students may earn credit toward graduation through special topics courses, Honors colloquia, seminars and other variable title courses. Such coursework may not be applied toward the general requirements of the college's degree programs. Variable title coursework may not be counted toward major, field of concentration or minor program requirements unless specifically and formally allowed by the academic unit responsible for the program.

Physical Education and ROTC

Maximum 4 credit hours of Physical Activity, Wellness and Sport (PWS) courses or lower-division ROTC—Aerospace Studies (ASTU) and Military Studies (MSCI)—courses, or of the two combined, may be counted toward the 120 credit hours required for graduation. A maximum of 12 upper-division credit hours in ASTU and MSCI courses may be counted toward the 120 credit hours required for graduation by students actively pursuing the university's Army and Air Force ROTC programs. These 12 upper-division credit hours may be counted in addition to the 4 lower-division credit hours permitted for ASTU/MSCI/PWS courses.

Applied Music and Music Ensembles

A maximum of 8 credit hours in Applied Music and Music Ensembles (MUS courses with a second digit of 5, 6 or 7) combined may be counted toward the 120 total credit hours or 42 upper-division credit hours graduation requirement. There is no limit on other music coursework.

Nontraditional Coursework

A maximum of 16 total credit hours of coursework from the following categories may be applied toward the 120 total credit hours and 42 upper-division credit hours graduation requirements. Moreover, no more than 8 credit hours of workshop credit may be applied toward this 16 credit hours limit. Credit hours earned in HONR 40099 are not included within this 16 credit hours limit.

Internships, Field Placements, Practica

Credit earned in internships, field placements, practica or courses with a similar experiential/applied nature is included within this 16 credit hours limitation. Such coursework may not be applied toward the General Requirements of the college's degree programs. The year of clinical training required in the medical technology program, similar training in other Three-Plus-One programs, student teaching and other experiential components of the education minor, and study-abroad programs are exempted from this limitation.

Individual Study

Credit earned in individual study and research coursework is included within this 16 credit hours limitation. Individual study and research credits may not be applied to major, field of concentration or minor program requirements unless specifically and formally allowed by the department responsible for the major, field of concentration or minor.

Workshops

Credit earned in workshop courses (course numbers ending in XXX93) is limited to no more than 8 credit hours and is included within this 16 credit hours limitation. Workshop credit may not be applied to major, field of concentration or minor program requirements unless specifically and formally allowed by the academic unit responsible for the program.

Mandatory Outcomes Assessment

In addition to the other General Requirements of the college, candidates for an undergraduate degree in the College of Arts and Sciences are required, as a condition of graduation, to participate in an outcomes
assessment. These outcomes assessments are conducted by each undergraduate degree program in the College of Arts and Sciences.

Residence Requirements for Minors
Students must complete at least two upper-division courses in the minor at Kent State on a graded basis (A-F). For information on the major Residence Requirements please visit the University Residence Requirements policy.

Three-Plus-One Programs
Students who choose to pursue Three-Plus-One programs take three years of preprofessional study at Kent State University, followed by a year or more of intensive professional training at an accredited professional school or clinical facility. Upon the satisfactory completion of this professional training, the B.S. degree from the College of Arts and Sciences at Kent State University is awarded. Students must earn 97 credit hours in a university. Appropriate transfer credit from other institutions may be included in these 97 credit hours, but the students must complete at least 42 credit hours in-residence at Kent State University, including the last 32 credit hours of the 97 credit hours requirement.

Students must have a minimum 2.000 GPA in all work taken at Kent State University. They must also complete with at least a 2.000 average all off-campus work taken to fulfill fourth-year requirements. In some fields, students may also be required to present other evidence of the satisfactory completion of the off-campus professional training.

Students must satisfy all degree requirements, including the B.S. General Requirements and field of concentration requirements, by a combination of credits earned at Kent State University and the professional school. The only exception is that the college's foreign language requirement is waived for students who successfully complete a Three-Plus-One program.

Three-Plus-One programs are designed for students with a well-defined, specific, professional career goal. Currently, the College of Arts and Sciences offers a Three-Plus-One program in Medical Laboratory Science. Because of the intensive, professional focus of these programs, students pursuing them should work closely with their faculty advisors. Students who are interested in this program should consult the Department of Biological Sciences, 256 Cunningham Hall, for further information.

Please see the program requirements for the Medical Laboratory Science program offered under the College of Arts and Sciences.

Topics include introduction and history of molecular forensics, crime scene evidence, serology (blood, semen, saliva), blood spatter, chromosome structure, principles of inheritance, linkage and crossing over, microsatellites (STRs), DNA extraction methods, standard PCR, capillary electrophoresis, mitochondrial DNA, sex chromosomes, basic population genetics, and CODIS database.

ANTH 38789  FACES: HUMAN HEAD ANATOMY WITH A FORENSIC ART FOCUS (ELR)  3 Credit Hours
Summer Florence Institute course: Renaissance artists became anatomists in order to create more life-like portrayals of the human figure, and Italy was in the forefront of these developments. Our course begins with studying works by these artist/anatomists: Antonio Pollaiuolo, Leonardo da Vinci, Michelangelo, and others, through visits to the Galleria dell'Accademia and Museum of the Bargello and lectures. We will examine drawings, paintings and sculptures of faces by these artists, and gain an appreciation for how well they understood human anatomy. We will also visit La Specola Anatomical Collection (exquisite wax models copied from real corpses during the 17th century) since we are studying anatomy. In the classroom, students will study human skulls, and learn the form and function of the muscles of facial expression and mastication. We will pay close attention to features of the skull that ultimately give each face its unique qualities, and study the areas that indicate age and sex of the individual. Each student will sculpt the facial bones of a skull, using an exact replica cast as a model. In the last part of the course students learn the techniques of two-dimensional forensic facial reconstruction. Using knowledge of head anatomy, and tissue depth data from the literature, each student will prepare detailed sketches (one man, one woman) based on a photograph of his and her skull. We will also learn about changes to the face over the life span, and make sketches of older people based on photographs of them when young.

HIST 62326  BETWEEN PLOWS AND SWORDS: U.S.-CHINA CULTURAL RELATIONS SINCE THE LATE 1700S  3 Credit Hours
(Slashed with HIST 82326) This seminar explores the beginning, evolution, transformation, and impact of U.S.-China cultural relations since the late 1700s. The United States and China have built a complex and dynamic relationship in the past two and a half centuries. Among the dimensions of that relationship, cultural relations were the oldest, deepest, and most consequential. While non-governmental organizations and individual Americans as well as Chinese played a crucial role in initiating and expanding cultural contacts between the two nations, government intervention and control were intensified over time, turning cultural relations into an instrument to achieve domestic as well as foreign policies goals. How did cultural contacts between the two nations begin? Who were the major players in the making of the Sino-American cultural relations? What were their major goals? How did the U.S. and the Chinese governments get involved in bilateral cultural contact and exchange? What impact did the expansion of cultural ties have on both societies? How were the U.S.-China cultural relations changed during the Cold War? What impact did the Cold War transformation have on cultural relations during and after rapprochement? By addressing these key questions, this course gives students a deeper understanding of the complexity and dynamics of U.S.-China relations.

HIST 62415 RELIGION AND VIOLENCE IN THE MODERN WEST 3 Credit Hours
(Slashed with HIST 82415) This course explores the role of religion in conflict throughout the modern Atlantic World. It is commonly believed that Western societies underwent a process of secularization in the modern age. However, recent scholarship has proven that religious beliefs and behaviors have retained their power, popularity and causal agency. This course is designed to give graduate students an introduction to recent trends in the writing of the history of religion and violence. Religion will be taken as social, cultural and political history, rather than merely ecclesiastical or theological history. Violence will be taken as rhetorics and cultures of violence, as well as warfare and other acts of physical violence. We will start the class by discussion theories of religion, including "civil religion" as an alleged replacement faith in an era of secularity; sample current debates on the question of the religious causes of violence; then survey prominent monographs and articles that address this nexus historically.

HIST 62485 THE CIVIL WAR AS EXPERIENCED AND REMEMBERED 3 Credit Hours
(Slashed with HIST 82485) This course looks at the U.S. Civil War from the point of view of the men (and occasionally women) who marched, camped, fought, suffered and died during the four years of conflict and the decades after. After giving brief attention to the causes and political issues that led to war, the course focus is on the experiences and reactions of the people called upon to fight it. Rather than concentrate on the famous leaders and generals, students look at the officers and men, civilians and enslaved people and other common folks on both sides who were thrust into the conflict. Some attention is paid to the guerrilla war, the draft, the POW experience and the participation of African Americans and Native Americans. The second part of the course looks at memory, commemoration and the effects of the war on many of these groups in the decades leading into the 20th century.

HIST 62500 REGIONAL IDENTITY AND OHIO HISTORY 3 Credit Hours
(Slashed with HIST 82500) As central as Ohio is in our national history, it is often underrepresented in standard historical narratives. This course explores the unfolding of more than two centuries of US history through the lens of the experience and understandings of residents of the State of Ohio. This changed perspective revisits many familiar themes -- indigenous histories, immigration, labor conflict, the Great Depression -- but moving our attention from the coast to the interior often places them in a revealing new light.

HIST 62505 SOCIAL MOVEMENTS IN THE 19TH-20TH CENTURY RUST BELT 3 Credit Hours
(Slashed with HIST 82505) This course explores the national and global history of social movements in the nineteenth and twentieth centuries through the lens of the great lakes region. While many social movements have focussed on the coasts, in fact the "Rust Belt" played a disproportionate role in fostering and populating radical movements from abolitionism to temperance to labor unionism as well as repressive movements like the Ku Klux Klan. Alternating between classic historical monographs and regional studies, the class interrogates the meaning of the region's sympathy to radical movements and also suggests a reconceptualization of these movements through a new geographic focus.

HIST 82326  BETWEEN PLOWS AND SWORDS: U.S.-CHINA CULTURAL RELATIONS SINCE THE LATE 1700S  3 Credit Hours
(Slashed with HIST 62326) This seminar explores the beginning, evolution, transformation, and impact of U.S.-China cultural relations since the late 1700s. The United States and China have built a complex and dynamic relationship in the past two and a half centuries. Among the dimensions of that relationship, cultural relations were the oldest, deepest, and most consequential. While non-governmental organizations and individual Americans as well as Chinese played a crucial role in initiating and expanding cultural contacts between the two nations, government intervention and control were intensified over time, turning cultural relations into an instrument to achieve domestic as well as foreign policies goals. How did cultural contacts between the two nations begin? Who were the major players in the making of the Sino-American cultural relations? What were their major goals? How did the U.S. and the Chinese governments get involved in bilateral cultural contact and exchange? What impact did the expansion of cultural ties have on both societies? How were the U.S.-China cultural relations changed during the Cold War? What impact did the Cold War transformation have on cultural relations during and after rapprochement? By addressing these key questions, this course gives students a deeper understanding of the complexity and dynamics of U.S.-China relations.

These encounters will be rooted in what was called the history of the "frontier," but is now more commonly described as "western" history or the study of "borderlands." Readings will emphasize sociocultural diversity among Indian societies, Indian agency, and Euro-American policy frameworks for Indian relations.

HIST 82415  RELIGION AND VIOLENCE IN THE MODERN WEST  3 Credit Hours
(Slashed with HIST 62415) This class explores the role of religion in conflict throughout the modern Atlantic World. It is commonly believed that Western societies underwent a process of secularization in the modern age. However, recent scholarship has proven that religious beliefs and behaviors have retained their power, popularity and causal agency. This course is designed to give graduate students an introduction to recent trends in the writing of the history of religion and violence. Religion will be taken as social, cultural and political history, rather than merely ecclesiastical or theological history. Violence will be taken as rhetoric and cultures of violence, as well as warfare and other acts of physical violence. We will start the class by discussion theories of religion, including "civil religion" as an alleged replacement faith in an era of secularity; sample current debates on the question of the religious causes of violence; then survey prominent monographs and articles that address this nexus historically.

HIST 82485  THE CIVIL WAR AS EXPERIENCED AND REMEMBERED  3 Credit Hours
(Slashed with HIST 62485) This course looks at the U.S. Civil War from
the point of view of the men (and occasionally women) who marched,
camped, fought, suffered and died during the four years of conflict
and the decades after. After giving brief introductions to the causes and
political issues that led to war, the course focuses on the experiences and
reactions of the people called upon to fight it. Rather than concentrate
on the famous leaders and generals, students look at the officers and men,
civilians and enslaved people and other common folks on both sides who
were thrust into the conflict. Some attention is paid to the guerrilla war,
the draft, the POW experience and the participation of African Americans
and Native Americans. The second part of the course looks at memory,
commemoration and the effects of the war on many of these groups in
the decades leading into the 20th century.

HIST 82500  REGIONAL IDENTITY AND OHIO HISTORY  3 Credit Hours
(Slashed with HIST 62500) As central as Ohio is in our national history, it
is often underrepresented in standard historical narratives. This course
explores the unfolding of more than two centuries of US history through
the lens of the experience and understandings of residents of the State
of Ohio. This changed perspective revisits many familiar themes --
indigenous histories, immigration, labor conflict, the Great Depression --
but moving our attention from the coast to the interior often places them
in a revealing new light.

HIST 82505  SOCIAL MOVEMENTS IN THE 19TH-20TH CENTURY RUST
BELT  3 Credit Hours
(Slashed with HIST 62505) This course explores the national and
global history of social movements in the nineteenth and twentieth
centuries through the lens of the great lakes region. While many social
movements have focussed on the coasts, in fact the "Rust Belt" played
a disproportionate role in fostering and populating radical movements
from abolitionism to temperance to labor unionism as well as repressive
movements like the Ku Klux Klan. Alternating between classic historical
monographs and regional studies, the class interrogates the meaning
of the region's sympathy to radical movements and also suggests a
reconception of these movements through a new geographic focus.

ITAL 35340 BOCCACCIO’S DECAMERON IN TRANSLATION  3 Credit Hours
The Decameron, one of the most entertaining, beloved and imitated
prose works ever written, is an accurate reflection of fourteenth-century
life in Italy. Like Dante’s Divine Comedy, this human comedy was
written not only to delight, but also to instruct by exploring both our
spiritual and our natural environment. Giovanni Boccaccio (1313-1375),
considered by some typically medieval and by others one of the first
truly modern literary figures to emerge from the darkness of the Middle
Ages into the light of the Renaissance, shows himself, as author of The
Decameron, to be both a passionate believer and a passionate critic
as he reconstructs society, destroyed by the Black Plague, through the
perfection of his 100-fold narrative. Boccaccio’s Decameron, of course,
generated a flourishing early modern tradition of proto-novelistic short-
story collections (think of Marguerite de Navarre and Cervantes), but also
provided substantial material for the nascent dramatic tradition (from
Machiavelli’s Mandragola to Shakespeare’s All’s Well). His biographical
collection, Of Famous Women, was an indispensable source and model
for the wide-spread debates on the status of women. His Genealogy
of the Gentile Gods was a staple of the Renaissance mythographical
tradition. This course is taught in English.

through critical reading and discussion of the Divine Comedy and
selected minor works: Vita Nova, Convivio, De vulgari eloquentia and
the Epistle to Cangrande. Close readings of the Inferno, Purgatory and
Paradise will explore the literary, political, theological and philosophical
concerns of the poem in order to understand Dante’s work within the
intellectual and social context of the Middle Ages. Some of the central
topics of the course will include Dante’s relationship to Florence, his
use of classical, Christian and mythological personages, symbols and
references; his views on the papacy and the empire, his relationship to
the people he encounters and the unique aspects of his vision of the
afterlife. In addition, we will focus on a variety of thematic concerns
including Dante’s understanding of poetry, grace, love and divine justice.
Though primarily taught through a combination of lecture and discussion,
the course will also focus on the use of art, film, music, performance,
digital media and other interdisciplinary methods that have been used to

Philosophy (PHIL)

PHIL 11001  INTRODUCTION TO PHILOSOPHY (DIVG) (KHUM)  3 Credit Hours
An introduction to the diverse methods and subject matters in philosophy. Topics may include: What are the arguments for the existence of God? Do humans have free will? Can we know anything with certainty, and how do we know anything at all? Is what we see real, or might it be only an illusion? What makes a person a person - their mind, or their physical attributes? Is the mind the brain, or is it something else?
Prerequisite: None.
Schedule Type: Lecture
Contact Hours: 3 lecture
Grade Mode: Standard Letter
Attributes: Diversity Global, Kent Core Humanities, TAG Arts and Humanities, Transfer Module Humanities

PHIL 11009  CRITICAL THINKING (KADL)  3 Credit Hours
Critical thinking is essential to every aspect of life, whether reading a news report or editorial, examining a contract or other legal document, or entering into a debate. This course teaches the strategies of “cognitive self-defense” that allow students to see past false claims and avoid being deceived by misleading rhetorical strategies. The course also examines the role of argument in reasoning, including types of arguments and the ways in which mistakes in reasoning can lead us astray. Examples from everyday life illustrate the sorts of complex reasoning that are a crucial part of practical decision-making.
Prerequisite: None.
Schedule Type: Lecture
Contact Hours: 3 lecture
Grade Mode: Standard Letter
Attributes: Kent Core Additional, TAG Arts and Humanities

PHIL 20095  SPECIAL TOPICS  3 Credit Hours

PHIL 21001  INTRODUCTION TO ETHICS (DIVG) (KHUM)  3 Credit Hours
What makes an action morally right or morally wrong, and who gets to decide? Is ethics about performing actions that are morally right, or is it about being a virtuous person? This course examines at least three competing theories about ethics, including challenges to each theory. Students get to decide which theory they think is best, but every theory presents its own strengths and weaknesses.
Prerequisite: None.
Schedule Type: Lecture
Contact Hours: 3 lecture
Grade Mode: Standard Letter
Attributes: Diversity Global, Kent Core Humanities, TAG Arts and Humanities, Transfer Module Humanities

PHIL 21002  INTRODUCTION TO FORMAL LOGIC (KMCR)  3 Credit Hours
This course is designed to sharpen students' reasoning skills and to help them better understand the structure of reasoning in general. To do this, it introduces students to some formal languages, such as Propositional Logic and Predicate Logic, that represent the logical structure of deductive reasoning. Unlike natural languages such as English, these formal languages allow students to focus on the general structure of different types of arguments, without discussing the content of any particular argument. Course covers both the construction of formal proofs in these languages, and translation between them and English. The study of formal logic contributes to effective and persuasive reasoning, not only in philosophy, but in any discipline or context. It also provides effective tools for evaluating the strength of English-language arguments. The skills that students acquire in this course are thus widely applicable in their personal, professional and academic lives.
