ANTH 38789 FACES: HUMAN HEAD ANATOMY WITH A FORENSIC ART FOCUS (DIVG) (ELR) 3 Credit Hours
Summer Florence Institute course: Renaissance artists became anatomists in order to create more life-like portrayals of the human figure, and Italy was in the forefront of these developments. Our course begins with studying works by these artist/anatomists: Antonio Pollaiuolo, Leonardo da Vinci, Michelangelo, and others, through visits to the Galleria dell'Accademia and Museum of the Bargello and lectures. We will examine drawings, paintings and sculptures of faces by these artists, and gain an appreciation for how well they understood human anatomy. We will also visit La Specola Anatomical Collection (exquisite wax models copied from real corpses during the 17th century) since we are studying anatomy. In the classroom, students will study human skulls, and learn the form and function of the muscles of facial expression and mastication. We will pay close attention to features of the skull that ultimately give each face its unique qualities, and study the areas that indicate age and sex of the individual. Each student will sculpt the facial bones of a skull, using an exact replica cast as a model. In the last part of the course students learn the techniques of two-dimensional forensic facial reconstruction. Using knowledge of head anatomy, and tissue depth data from the literature, each student will prepare detailed sketches (one man, one woman) based on a photograph of his and her skull. We will also learn about changes to the face over the life span, and make sketches of older people based on photographs of them when young.

This course considers how artists responded to these social changes by exploring art movements in France and beyond across a wide range of artistic media —including spirit photographs, Moulin Rouge posters, and cemetery sculpture. This time period in American history is characterized by waves of social unrest followed by periods of peace that American artists reflected and shaped in their work. The American-Indian Wars and the Trans-Atlantic slave trade also profoundly impacted the art and politics of the early United States, inspiring artists to support or protest conflicts in society with their art. Exchanges with African, Indigenous, as well as Asian and European peoples pervaded every aspect of art in the United States. In looking widely at objects such as paintings, clothing, food advertisements, and furniture, this class will examine debates about nationhood in early American art that exploded by the Civil War.

New styles in abstraction and technological innovations in photography, lithography, and cinema dramatically altered the trajectory of American art and resulted in an expansion of art museums and patronage. As the United States gained economic power and expanded its borders, American art was also profoundly influenced by movements such as French Impressionism and Mexican muralism, and shaped by artists as close as Canada and as far as Australia. While American artists were debating whether to welcome “foreign” influences in their work, debates over racial segregation and women’s suffrage permeated art and politics on the homefront. In looking widely at objects such as paintings, photographs, silverware, and public monuments, this class will examine the art and visual culture of the United States from the Civil War to Civil Rights movement.

Using a roughly chronological approach, students examine the profound and lasting contributions made by the Dadaists and Surrealists, as well as other revolutionary modernists of the early 20th century who sought to escape the traditional and rational in art and thought with sincerity in spite of the often superficially simple or even sometimes nihilistic appearance of their efforts. Through an analysis of selected works from this period and their relevant precursors, an attempt will be made to define the progressive ideas which led to the dismantling of previous standards and the rise of an anti-art spirit which continues today in various guises. Primary documents are considered regularly to provide students with a wider appreciation for the variety of media (e.g., film, theater, typography) and the issues and characters involved.

In regard to structure, this is a reading intensive course designed to empower students with 'influential' visual and textual languages, as well as knowledge of critical race, gender and sexuality studies. ARTH 42069 NATIONS AND BORDERS 3 Credit Hours
(Slashed with ARTH 52069) Emphasizing art and visual culture since World War II, this course considers the phenomenon of the nation-state in the context of embodied borders and diasporas. From the historically charged U.S.-Mexico borderlands to the Berlin Wall that divided East and West Germany, modernity is characterized by the development of nations and subsequent nationalisms as well as the delineation of borders and boundaries—and, once unpacked, theoretical and physical embodiments become legible. Taking a historically-grounded and global approach to state production and displacement, critical texts—many of which are grounded in feminist and queer theories—will address various interpretations of boundaries, especially national and corporeal. We will explore the intellectual history of nation-building and subsequent textual analyses of geographic and embodied borders. We will also study specific art historical moments, such as the militarization of the U.S.-Mexico frontera, Israel's occupation of Palestine, treating East and West Berlin as metaphor and allegory, the borderlands of queer and black identities in the United States and present-day Euro-American imperialism. The course format consists of rigorous class discussions guided by readings and illustrated presentations.
Prerequisite: Junior or senior standing.
Schedule Type: Lecture
Contact Hours: 3 lecture

Furthermore, students consider the benefits and pitfalls of the field and the ways in which art historians, critics and curators have treated African American art in U.S. museums. By the end of this course, students will have a deeper understanding of African American art and its tangled identity politics.

ARTH 52060 RUSSIAN ART 3 Credit Hours
(Slashed with ARTH 42060)This course explores the history of Russian art starting with the legacy of Byzantium and continuing up through the end of the Soviet era, from about 1000 CE to the present. Russia's artistic movements have borrowed from a wide variety of cultures, both from groups that have attacked and conquered Russian territories as well as from groups that Russians themselves have conquered and attacked. We will focus on art that was produced in Russia as well as the cross-cultural influences that shaped and changed this art. Painting will be a dominant focus, coupled with a broad study including decorative arts like porcelain and embroidery as well as architecture, performance and illustration.

ARTH 52064 DADA AND SURREALISM 3 Credit Hours
(Slashed with ARTH 42064) Using a roughly chronological approach, students examine the profound and lasting contributions made by the Dadaists and Surrealists, as well as other revolutionary modernists of the early 20th century who sought to escape the traditional and rational in art and thought with sincerity in spite of the often superficially simple or even sometimes nihilistic appearance of their efforts. Through an analysis of selected works from this period and their relevant precursors, an attempt will be made to define the progressive ideas which led to the dismantling of previous standards and the rise of an anti-art spirit which continues today in various guises. Primary documents are considered regularly to provide students with a wider appreciation for the variety of media (e.g., film, theater, typography) and the issues and characters involved.

ARTH 52065 FEMINIST AND QUEER ART AND CULTURAL THEORY 3 Credit Hours
(Slashed with ARTH 42065) This advanced and interdisciplinary art history course explores feminist and queer visual histories, with particular attention to related cultural theories. In addition to paradigmatic ideologies of difference and language, this course is based on indispensable and sometimes peripheral postmodern milieux such as politicized identities, economies and the body, the importance of feeling and the everyday, feminist-Marxist critiques of community and the state and notions of lived histories/narratives. In regard to structure, this is a reading intensive course designed to empower students with 'influential' visual and textual languages, as well as knowledge of critical race, gender and sexuality studies. Readings, discussions, projects and knowledges-at-large are applicable in the artist's studio and more broadly, in humanities scholarship.

ARTH 52069 NATIONS AND BORDERS 3 Credit Hours
(Slashed with ARTH 42069) Emphasizing art and visual culture since World War II, this course considers the phenomenon of the nation-state in the context of embodied borders and diasporas. From the historically charged U.S.-Mexico borderlands to the Berlin Wall that divided East and West Germany, modernity is characterized by the development of nations and subsequent nationalisms as well as the delineation of borders and boundaries—and, once unpacked, theoretical and physical embodiments become legible. Taking a historically-grounded and global approach to state production and displacement, critical texts—many of which are grounded in feminist and queer theories—will address various interpretations of boundaries, especially national and corporeal. We will explore the intellectual history of nation-building and subsequent textual analyses of geographic and embodied borders. We will also study specific art historical moments, such as the militarization of the U.S.-Mexico frontera, Israel's occupation of Palestine, treating East and West Berlin as metaphor and allegory, the borderlands of queer and black identities in the United States and present-day Euro-American imperialism. The course format consists of rigorous class discussions guided by readings and illustrated presentations.

ARTH 52166 HISTORIES AND THEORIES OF MODERN AND CONTEMPORARY ART 3 Credit Hours
This course examines both the visual and textual. As such we travel through contemporary moments such as Abstract Expressionism, Post-Painterly Abstraction, Nouveau Réalisme, Pop, Minimalism, Conceptual art and participatory art—to name a few. So too, this course entails a broad overview of critical and theoretical approaches often engaged by contemporary artists such as existentialism, psychoanalysis, structuralism, semiotics, feminist and queer theories, theories of modern sculpture, and theories of photography. When art and theory are taken together, modern and contemporary art underscores the cultural, sociopolitical and economic developments characteristic of the last half of the twentieth century. While time constraints restrict a consideration of every artist, a selection of practitioners will be addressed. That said, this course affirms the importance of questions rather than finite answers, celebrates ambiguity and neglects any attempt at surveying and summarizing the field of modern and contemporary art.

ARTS 35310 OFF-LOOM 3 Credit Hours
This course focuses on the architectural aspects of interlacement. Moving off the loom, students construct with thread, yarn and other long flexible materials to transform line into planar or sculptural form. Explorations engage space and the pliability of textiles to emphasize the physical and tactile aspects of the materials and construction methods inherent to fiber. Processes such as plaiting, netting, knotting, looping, wrapping, coiling, ropemaking and basketry provide a foundational vocabulary in the exploration of dimensional textiles. The use of traditional materials are combined with found materials to further engage the question of material meaning. Students approach the sensibilities of weaving outside of highly technologized looms by working with direct and accessible tools to find freedom in the pursuit of experimental form. These material and technical vocabularies are framed through course texts, presentations and critical discussions. Students output studies and realized works which engage relief, sculpture and space. Students who do not meet the prerequisite may register for the course with special approval. Please speak to an advisor for more information.

ARTS 35312 DIGITAL TEXTILES 3 Credit Hours
With connections to technology and industry, textile practices employ digital platforms to speculate form and simulate materiality. Building off these techno-industrial strategies, students engage hybrid making that moves between the screen and material to imagine textile futures. Workshops present a digital textile vocabulary encompassing digital design, repeat and pattern layouts and material simulation. Student work is output through digital fabrication resources at the DI HUB. Coursework considers practices that engage textiles across experiential and technological platforms in contemporary art and design. Essential to this inquiry, students participate in critical discussions of core texts alongside their own making. Studio production engages digital design and outsourced fabrication. This work yields studies and fully realized artworks developed through in-process discussions and presented in formal critique settings. Students who do not meet the prerequisite may register for the course with special approval. Please speak to an advisor for more information.

ARTS 35313 BACKSTRAP WEAVING 3 Credit Hours
This rhizomatic potential of weaving is exemplified with backstrap weaving where looms are constructed and altered freely according to the improvisational vision of the weaver. Working from this orientation, this course engages the fluidity of the backstrap loom to transgress binary thinking, and further integrate skill building alongside conceptual development. Students combine traditional and experimental materials with the exploration of four-selvedge cloth, brocade and double cloth to develop a rigorous vocabulary. Visual, pictorial, architectural, sculptural, performative and nomadic practices are explored in a polynary pursuit of weaving. Making occurs in concert with the study of woven cosmologies that predate the modernist lineage. Studio production oscillates between generating material vocabularies and self-directed making workshopped through regular critiques. This coursework considers weaving expansively to disrupt dominant paradigms that define textility through technological and social binaries. Students who do not meet the prerequisite may register for the course with special approval. Please speak to an advisor for more information.

Students are introduced to natural and synthetic dye technologies, and develop vocabulary in immersion dyeing, direct application of dyes, dye resists and dye discharges. Alongside material outputs, students investigate the social, economic and historic position of dyes and dyestuffs. Consideration of color as a source of content is a primary point of focus. Coursework includes studio activity, critical discussion of core texts and individualized research. Students produce studies and fully realized artworks developed through in-process discussions and presented in formal critique settings. Students who do not meet the prerequisite may register for the course with special approval. Please speak to an advisor for more information.

ARTS 45314 PRACTICES IN WEAVING: TAPESTRY 3 Credit Hours
(Slashed with ARTS 55314)(Repeatable for credit) This intensive studio course considers tapestry expansively as an interface through which weaving contributes to aesthetics and meaning according to its own logic and history. Woven form is realized in collaboration with the tectonic grid of the loom, yielding a unique relationship to image-making; the structural surface and the image it bears are one and the same. Working with multi-harness floor looms, students engage this question through rigorous material explorations. Vocabulary is expanded through the study of double cloth, discontinuous/supplementary wefts and dye processes. The position of weaving as a progenitor of abstraction and the role of color as a catalyst for meaning are essential points of inquiry. Critical discussion of core texts and individualized research occur in tandem with studio activity. Students produce studies and fully realized artworks developed through in-process discussions and presented in formal critique settings. This work considers the practice of weaving as an expansive playground to complicate the paradigms of contemporary art with textility. Students who do not meet the prerequisite may register for the course with special approval. Please speak to an advisor for more information.

(Slashed with ARTS 55351)(Repeatable for credit) This intensive studio course focuses on weaving and its relationship to the evolving landscape of contemporary art. Working with multi-harness floor looms, students engage rigorous questions in imagery, sculptural form and spatial intervention. Here, students enter the space of “loom-thinking” to create, mutate, subvert and interrupt weave drafts and thread interlacements in the production of woven form. Through their developing technical virtuosity, students push the algorithmic sensibility of weaving toward visual and material poetics. Critical discussion of core texts and individualized research occur in tandem with studio activity. Students produce studies and fully realized artworks developed through in-process discussions and presented in formal critique settings. This work considers the practice of weaving as an expansive playground to complicate the paradigms of contemporary art with textility. Clinical Education (CLI)

CLI 80200 STANDARDIZED PATIENTS ROTATION 1 Credit Hour
Offers second year students the opportunity to interview standardized patients and receive feedback on their patient interviewing and history recording skills which prepares them to function competently in a doctor/patient encounter. Some students find that interviewing patients comes naturally, while for others it is more a learned skill. The standardized patients are actors who have been coached to simulate actual patients so accurately that the simulation could possibly fool even a skilled clinician.

Schedule Type: Clinical Laboratory
Contact Hours: 4 other
Grade Mode: Satisfactory/Unsatisfactory

CLI 80311 WOUND CARE 2 Credit Hours
The clinical rotation provides students with an opportunity to become exposed to the clinical practice of wound care. Students have a unique opportunity to be involved in wound care patient management, which is an essential part of podiatric medical practice. Students develop skills in wound care patient management as well as communication skills. Students also develop cognitive reasoning skills so as to accurately diagnose comorbid conditions and develop treatment plans appropriate for each patient. Students are exposed to a variety of wound pathology during this clinical wound care rotation. A combination of physician-guided patient care and nursing lead discussion groups allow students to be exposed to many topics related to the essentials of wound patient management. Students are able integrate knowledge already gained in the classroom with clinical medicine.

An effort is made to correlate didactic information learned in the classroom with the rationale behind why many surgical procedures are performed. Adequate demonstration of surgical skills are provided along with practice time and constructive performance feedback. Upon successful completion of this course, students should possess a basic understanding of and the ability to perform physical skills which are necessary in foot and ankle surgery. Course covers general medicine, simulated patient interactions and clinical skills exam exposure.

CLI 80320 RADIOLOGY ROTATION 2 Credit Hours

Clinical rotations function by adapting and applying classroom information to real life, "hands-on" situations. A majority of foot complaints necessitate the taking and the reading of radiographs. As specialists of the foot and ankle, podiatrists are in a unique situation in being able to take and interpret radiographs in their own offices. Radiographic analysis is therefore an integral component of podiatric medical education. The Radiology/Medical Imaging rotation focuses on those skills commonly performed by the podiatrist. This includes positioning and developing radiographs along with recognizing the most common pedal pathologies.

Students are evaluated on their ability to present the case history, treat the patient and properly record their findings. Students receive clinical conferences on a variety of podiatric medical topics with practical exams in many areas. Two months are spent at the Cleveland Foot and Ankle Clinic. One month is spent at the Cleveland VA Hospital. This rotation also provides the student with the opportunity for observation and practice of examination skills required in performing a musculoskeletal and biomechanical evaluation. This involves the development of skill in obtaining a biomechanical/musculoskeletal history, arthrometric evaluation, visual gait analysis and musculoskeletal examination to include muscle strength testing, flexibility and range of motion. The course will be focused mainly on European Documentaries as a way of teaching the thematic and political difference between the cultures of the two continents. ESCI 72060 EARTH OBSERVING 3 Credit Hours
(Slashed with ESCI 42060 and ESCI 52060) Students are introduced to visible, thermal and LiDAR remote sensing methods. Visible and near infrared multispectral and hyperspectral data sets are used for a wide variety of research including land use change, water quality research and agricultural remote and proximal sensing. Thermal remote sensing can be used to characterize surface temperature changes, earth materials and thermal stresses on plants. LiDAR provides the ability to measure variations in surface topography and can “see” through clouds and jungle canopy and even penetrate aquatic environments to measure algal biomass and suspended sediment. Remote sensing is the use of instrumentation to obtain spectral and spatial information about an object or surface without direct contact. All matter interacts with electromagnetic energy through thermal emittance, absorption, transmittance, reflectance and/or scattering. Different materials have distinct electromagnetic signatures depending on their composition, structure and the nature of the energy with which the material is interacting. This course focuses primarily on multispectral and hyperspectral visible remote sensing, but the field of remote sensing makes use of information throughout the electromagnetic spectrum to sense the environment around us. Note that most of the data sets that are examined and analyzed in this course are multispectral Landsat images. Students are encouraged to explore various topics or geographic regions for their class project. It is recommended that students take an introductory GIS class prior to enrollment.
