WMST 30202 FEMINIST HUMOR: DISARMING LAUGHTER, DISRUPTIVE DISCOURSE 3 Credit Hours
This course utilizes four key terms to set its directions of inquiry: humor, laughter, discourse and feminist. The most fundamental pursuits are inductive in nature, grounding studies in actual discursive practice, the realities of women's politically-charged and personally-resonant humor, laughter and feminisms as they converge in contexts both private and public, mediated and live/face-to-face. Scholarship on feminist humor provides our final framing.
Prerequisite: None.
Schedule Type: Lecture
Contact Hours: 3 lecture
Grade Mode: Standard Letter

WMST 30301 REPRESENTATIONS OF WOMEN AND FEMINISM IN POPULAR CULTURE 3 Credit Hours
The basic challenge of this course is that it requires the study of two things simultaneously: 'women' and 'women as represented' in popular culture. From the classic object of woman sexed and gendered, feminist study has evolved to also consider woman the subject, the autonomous person with agency within her environment. The course covers much ground: dominant narratives; the often-overlapping contexts of media, politics, morality and religion; the signs inherent in language and imagery; and the power asymmetry and embattled definitions of “woman.” Throughout the course, we employ varied approaches that resist any one right answer, easy dogmatic conclusion or evaluation of the narratives.
Prerequisite: None.
Schedule Type: Lecture
Contact Hours: 3 lecture
Grade Mode: Standard Letter

WMST 30302 GLOBAL FEMINISMS: A WORLD AND CENTURY OF WOMEN'S ACTIVISM 3 Credit Hours

This course explores real and diverse circumstances where feminisms have emerged. Over the semester, we examine feminist movements and their respective contexts; feminists' distinct directions of thought and action; individuals, groups and organizations that have participated in defining feminism; and finally, the connectivity that makes transnational feminist work possible. The course is grounded in sites of 'agonizing and organizing,' as well as in those feminist narratives that search for cohesion even where there is tension. Finally, throughout the course, we embrace and explore complexities of unresolved issues: none more basic than the still controversial claim that women's rights are human rights.

Prerequisite: None.
Schedule Type: Lecture
Contact Hours: 3 lecture
Grade Mode: Standard Letter

WMST 32323 RAPE CULTURE: RETHINKING DANGER, POWER, SEX AND FEMINIST FRAMINGS 3 Credit Hours

Nothing is simple, incontrovertible or 'cool' in 'rape culture.' The subject, act and discourse surrounding rape is embedded in culture and confounded by culture: by opinions, standpoints, simplistic arguments and personal and political interests. Feminist framings of 'rape culture' invite different inquiry: into mythology, ideology, theory and alternative interpretations of bodies in a given context. Famed feminist Andrea Dworkin interrogates rape culture's center: powers practically guaranteed, moreover "exercised… [and] protected… by religion … by universities … [even] by [poets and artists], the unacknowledged legislators of the world." This course utilizes multiple approaches to study and interrogate 'rape culture,' each of which illuminates this inherently dark subject in new light.

Prerequisite: None.
Schedule Type: Lecture
Contact Hours: 3 lecture
Grade Mode: Standard Letter

WMST 40992 PRACTICUM IN WOMEN'S STUDIES (ELR) 3 Credit Hours

(Repeatable for credit) An assignment at a private, public or nonprofit organization that centers on women's issues such as education health and policy making. Arrangements must be made in the semester prior to registration.

Prerequisite: Special approval.
Schedule Type: Practical Experience
Contact Hours: 9 other
Grade Mode: Standard Letter
Attributes: Experiential Learning Requirement

WMST 41199 CAPSTONE IN WOMEN'S STUDIES (ELR) 3 Credit Hours

The capstone project is a guided undertaking that serves as culmination of students' experiences. The emphasis is 'putting it all together,' integrating the Women's Studies minor into 'the bigger picture': major(s), other concentrations, research, envisioned graduate study and/or vocation. WMST Capstone can be taken junior or senior year, contrived/structured by students in consultation with faculty advisor(s), ideally advisors from major and minor. Net outcome may be paper--senior thesis for students who desire such--presentation, curated portfolio of prior academic work.

Prerequisite: Junior Standing.
Schedule Type: Project or Capstone
Contact Hours: 3 lecture
Grade Mode: Standard Letter
Attributes: Experiential Learning Requirement

WMST 44321 PIVOTAL PRAXIS: EXPERIMENTS IN ACTIONABLE FEMINISM 3 Credit Hours

This course engages students at the pumping heart of the whole feminist story: its actual work. For feminists on the ground, pivotal praxis is feminism: getting the vote, demanding equality, wrangling through contentious issues, women's marches and campaigns. In a word: practice. Experiments in practical, actional feminism. Our study probes ideas that hit streets as well as ideas born of "done things." Under scrutiny are scenes: socio-political, cultural spaces wherein women enact change, determine outcomes recognized as feminist. These include but are not limited to the realpolitik of suffrage vs. anti-suffrage, consciousness-raising, the famed national women's convention in Houston, internet activism, transversal coalition-building across boundaries/borders. The course provides opportunity for students' own experiments and exercises in feminist praxis.

Prerequisite: None.
Schedule Type: Lecture
Contact Hours: 3 lecture
Grade Mode: Standard Letter

Diversity Course Requirement

ASK A QUESTION OR SUBMIT FEEDBACK ON THIS POLICY

The purpose of Kent State's diversity requirement is to help educate students to live in a world of diverse communities, many of which are becoming increasingly permeated with cultural and ideological differences. The study of diversity is intended to promote awareness of local and global differences, to identify shared values, to improve understanding of one's own culture, and to encourage people to explore and respect differences.

The diversity requirement is part of the university's broader efforts to encourage, both at the university and beyond, the development of communities in which all members and their contributions are recognized and valued. Diversity courses provide opportunities for students to learn about such matters as the history, culture, values and notable achievements of people other than those of their own national origin, ethnicity, religion, sexual orientation, age, gender, physical and mental ability, and social class. Diversity courses also provide opportunities to examine problems and issues that may arise from differences, and opportunities to learn how to deal constructively with them.

Courses that satisfy the diversity requirement aim to give students significant opportunities to:

- Address diversity issues, particularly those involving unequal and/or discriminatory treatment
- Compare positive and negative implications of various parochial or "...centric" perspectives
- Encourage global awareness and sensitivity
- Engage issues of racial or ethnic perceptions, attitudes and stereotypes
- Examine patterns and trends of diversity in the United States
- Explore ways to communicate and participate constructively in a diverse community
- Foster appreciation of aesthetic dimensions of other traditions and cultures
- Learn systematic approaches to understanding cultural differences and commonalities
- Learn systematic techniques for dealing constructively with problems arising out of cultural differences
- Participate in special programs that promote understanding other peoples
- Study Western and non-Western cultures in a world context or from a comparative perspective
- Understand how one's own culture shapes one's perceptions, ideology and values

It is understood that not every course will address all of these criteria.

Requirements

As part of the requirements for any bachelor's degree at Kent State, all students must satisfy the diversity requirement, consisting of one course addressing domestic (U.S.) issues and one course addressing global issues.

At least one course must come from the Kent Core. Students may satisfy the second diversity requirement in one of three ways:

1. They may complete the second diversity course from the Kent Core, which also will count toward fulfilling the Kent Core.
2. They may complete any non-Kent Core diversity course. This course may also count toward major or minor program requirements or may be used as an elective.
3. They may satisfy the global diversity requirement by completing a course in another country.

Flashes 101 (New Student Orientation)

ASK A QUESTION OR SUBMIT FEEDBACK ON THIS POLICY

All undergraduate students are required to satisfactorily complete UC 10001 to earn an associate or bachelor's degree at Kent State. New student orientation courses from another college or university may not be substituted for Kent State's course.

The only exceptions to the requirement are the following:

1. Incoming students who are designated by Kent State admissions as adult students (21 years or older). These students are encouraged to contact the Center for Adults and Veteran Services or a Regional Campus advising office for information regarding the availability of special orientation programs for adult students.
2. Students who transfer 30 or more credit hours from another higher education institution, excluding post-secondary and dual-enrollment credit (College Credit Plus).

Full-time students are expected to complete UC 10001 during their first semester of enrollment. Part-time students are expected to complete the course before they attain sophomore standing (30 credit hours).

Experiential Learning Requirement

Kent State University's experiential learning requirement (ELR) provides students with the opportunity to initiate lifelong learning through the development and application of academic knowledge and skills in new or different settings.

Kent State recognizes that there are diverse ways to fulfill the experiential learning requirement. To accommodate such diversity, an experiential learning activity may fall into one or more of the following categories:

- **Civic Engagement** enables Kent State students to interact with people from diverse backgrounds; to challenge their understanding of community needs and the systems addressing those needs; and to explore ways of improving community life. The primary purpose for activities that fall into this category encompasses community involvement, awareness, learning or reflection.
- **Creative/Artistic** activities enable Kent State students to engage in various forms of creative expression to produce works that reflect a synthesis of knowledge and skills. These works may be original or interpretative and may be expressed though performances, portfolios, exhibits, pieces of work or other significant projects.
- **Practical Experiences** enable Kent State students to actively extend learning to new contexts outside the typical classroom environment. These experiences allow students to use skills and concepts related to their career path while engaging in work-like settings that are common to their field of study
- **Research** activities enable Kent State students to engage in systematic inquiry that contributes to the discovery or interpretation of knowledge significant to their field of study. This research can be applied, creative/artistic, descriptive, experimental, historical, inferential, observational or theoretical.
- **Study abroad/Away** activities enable Kent State students to be immersed in an off campus environment. These experiences contribute to a student's understanding of culture, customs, diversity, history, language, politics, religion, society and/or traditions.

Requirements

1. As part of the requirements for any baccalaureate, all students must satisfy the experiential learning requirement.
2. The requirement may be fulfilled by a course, a component of a course or a non-credit paid or unpaid experience. Courses may be at either the lower-or upper-division level.
3. For non-course options, students must obtain prior approval from their program faculty for the experience.
4. The requirement may be fulfilled individually or collaboratively.
5. Students must meet the learning outcomes listed below and any additional learning outcomes as defined by their program.
6. Satisfactory completion of this requirement will be determined by the faculty.
7. Experiential learning opportunities must be completed while enrolled at Kent State University.
8. These experiential learning opportunities must meet existing university regulations and guidelines (e.g., institutional review board approval for research with animals or human subjects, memoranda of affiliation/understanding with community partners).

Learning Outcomes

Students will be able to:

- Connect ideas, concepts and skills developed at the university with their applications to new and different contexts.
- Demonstrate the implementation of ideas, concepts and/or skills studied at the university in new and different contexts.
- Demonstrate how this experience has broadened their understanding of the discipline, the world of themselves as learners.
- Reflect on the meaning of the experience for their current and future learning.

Kent Core (General Education Requirement)

ASK A QUESTION OR SUBMIT FEEDBACK ON THIS POLICY

The Kent Core is the foundation of the university's mission to prepare students to live in today's complex, global society. It broadens intellectual perspectives, fosters ethical and humanitarian values and prepares students for responsible citizenship and productive careers. Through this learning experience, students develop the intellectual flexibility they need to adapt to an ever-changing world.

Kent Core courses enable students to:

- Acquire critical-thinking and problem-solving skills
- Apply principles of effective written and oral communication
- Broaden their imagination and develop their creativity
- Cultivate their natural curiosity and begin a lifelong pursuit of knowledge
- Develop competencies and values vital to responsible uses of information and technology
- Engage in independent thinking, develop their own voice and vision and become informed, responsible citizens
- Improve their understanding of issues and behaviors concerning inclusion, community and tolerance
- Increase their awareness of ethical implications of their own and others' actions
- Integrate their major studies into the broader context of a liberal education
- Strengthen quantitative reasoning skills
- Understand basic concepts of the academic disciplines

Although not every Kent Core course will address all these goals, learning within the Kent Core as a whole enables students to acquire the tools for living rich and meaningful lives in a diverse society.

Requirements

- As part of the requirements for any bachelor's degree and the Associate of Arts and Associate of Science degrees, all students must complete a minimum 36-37 credit hours of the Kent Core distributed as indicated within the specific categories.
- As part of the requirements for any applied and technical associate degrees (A.A.B., A.A.S., A.T.S.), all students must complete a minimum 15 credit hours of the Kent Core distributed as indicated within the specific categories.
- Colleges or degree programs may augment the university's minimum Kent Core, and they may specify for their students certain courses in fulfillment of the requirements. It is essential, therefore, that students consult that section of the catalog for their college and degree program.
- The Kent Core should normally be completed within the 60 credit hours that immediately follow the first date of enrollment in a bachelor's degree program.
- Honors equivalents shall satisfy the Kent Core.
- None of the courses on the Kent Core list may be taken pass/fail.

Transfer Credit, Proficiency Testing and Other Options in Meeting the Kent Core

1. Certain alternatives to formal Kent State coursework may be recognized in the fulfilling of the Kent Core.
2. Credits earned for specified courses within the Kent Core course list through external credit-conferring testing programs, such as the College Board Advanced Placement and College Level Examination Program (CLEP), will be applied toward the fulfillment of the Kent Core as appropriate for the specific courses for which credit is received.
3. Courses transferred from accredited post-secondary institutions will be applied toward fulfillment of the Kent Core as appropriate for the specific courses for which credit is awarded.
4. The university's Credit-By-Examination (CBE) program may be utilized in fulfillment of the Kent Core within the conditions, guidelines and policies established for that program and for the course (s) for which credit is sought.
5. Proficiency, as established by placement examinations or other recognized procedures and mechanisms for this purpose, can be used to fulfill Categories I (Composition) and II (Mathematics and Critical Reasoning) of the Kent Core. For example, students who are placed into ENG 21011 and complete it with a passing grade will have met the Category I. It is assumed that students who are placed at and pass the higher level of one of these sequenced courses have also mastered the content of the prerequisite course. While students may meet the requirements of Categories I and II through proficiency, minimum credit hours must be met in Categories III, IV, V and VI. Students meeting Categories I and II requirements through proficiency must substitute other courses, which shall be elective, to earn the minimum credit hours required for the bachelor's or associate degree.

To fulfill the purposes of general education, any of the above alternatives to the fulfillment of the Kent Core by formal coursework at Kent State University must be exercised by the students within the first 60 credit hours of academic credits earned at and/or transferred to Kent State University.

Students who transfer to the university with more than 45 credit hours of applicable credits (including students with associate's degrees in technology from the Kent State University Regional Campuses or those who transfer to bachelor's-level programs from associate-level technology programs) must exercise such option(s) within the first calendar year of their Kent State University enrollment.

Post-undergraduate students who have earned a baccalaureate from a regionally accredited institution will be deemed to have completed the equivalent of the university's Kent Core requirement. By virtue of having earned a bachelor's degree, these students will be recognized as

having completed their general education requirements. If they pursue an academic program at Kent State University that requires specific courses that are also in the Kent Core but are unmet, they can be held to those requirements because the courses are considered program requirements first and foremost.

Kent State students who update their official catalog from a year prior to 2010 to the current catalog year will be given special consideration in determining completion of the Kent Core. If students have met all of the general education requirements (or Liberal Education Requirement) in their prior catalog, their Kent Core will be considered complete. Students must contact their advisor to determine eligibility.

Writing-Intensive Course Requirement

ASK A QUESTION OR SUBMIT FEEDBACK ON THIS POLICY

The purpose of the writing-intensive course (WIC) requirement is to assist undergraduates in becoming effective writers within their major discipline. Building on earlier writing courses, the WIC focuses on writing forms and standards used in the professional life of the discipline. Through these courses, students should understand and experience the ways in which writing shapes and enhances the acquisition and communication of knowledge.

All writing-intensive courses must meet the following criteria:

- Be designed, at least in part, to help students become effective writers in a specific discipline
- Involve a substantial amount of writing
- Provide at least one writing assignment where there is an opportunity for guided revision before grading occurs

Requirements

1. As part of the requirements for any baccalaureate, all students must satisfy the writing-intensive course requirement.
2. At least one upper-division course from the writing-intensive course list must be completed with a minimum C grade.
3. Students should fulfill the requirement by taking a course in the major. In rare instances, a student may use a writing-intensive course from another discipline if approved by the student's major department or school.

Full Description

The Bachelor of Business Administration degree in Economics equips students with a variety of skills sought by employers, including conceptualizing and solving problems; locating, organizing and using relevant information; and analytical ability.

In their junior year, students learn microeconomic and macroeconomic theory and take an econometrics class to learn basic analytical skills. Students then take a series of electives that deal with vital current topics relevant to many careers in which these theories and skills are applied, such as U.S. financial and banking system; the economic relations between the United States and foreign countries; government spending and taxation policies; and the U.S. health system and policy options.

During their senior year, students take a capstone course that utilizes and applies the theory, skills and institutional knowledge learned in the program.

Economics students may apply early to either the M.B.A. degree or the Master of Arts in Economics degree and double count 9 credit hours of graduate courses toward both degree programs. See the Combined Bachelor's/Master's Degree Program policy in the University Catalog for more information. Undergraduate students applying to the combined program with the Master of Arts in Economics degree must have a minimum 3.200 overall Kent State GPA.

Full Description

The Finance minor allows students to gain some familiarity with financial management, as well as with the financial system of institutions and markets in which firms must operate. Some knowledge of finance is necessary to understand and work in most businesses and organizations. Profits and value creation are the “bottom lines” to which companies direct their efforts. Some acquaintance with investment techniques may help students in managing their personal finances.

The Finance minor is particularly useful for business students in other majors who take the requisite courses, and for other students who desire to acquire some understanding of finance without having to take all the core business school requisites. Both groups are exposed to important fundamentals, yet they also will have the flexibility to consider several areas of finance.

The Bachelor of Business Administration degree in Business Analytics provides students with understanding of the diverse knowledge they need to be effective business data analysts. The focus of the major is to develop students who will understand and be able to apply business analytics to real-world problems.

While the major's curriculum builds student expertise from theory, the focus is the practical application of the analytics knowledge. Therefore, the major primarily emphasizes problem-solving with data for strategic business decision-making using various analytics tools such as data visualization and machine-learning technologies. Examples of business analytics applications include marketing analysis or segmentation, city planning, delivery logistics, risk management, security and healthcare management.

Graduates from the program will be in demand for entry-level analytics positions in the workforce.

Business analytics students may apply early to either the M.B.A. degree or the M.S.B.A. degree and double count 9 credit hours of graduate courses toward both degree programs. See the Combined Bachelor's/ Master's Degree Program Policy in the University Catalog for more information.

Full Description

The Bachelor of Business Administration degree in Computer Information Systems provides students with a focus on digital transformation management and/or the design of innovative information systems that are commonly used in organizations to create business value. This up-to-date major offers a techie-for-future IT and business managers structure starting with an introduction to information systems (IS) and emerging digital technologies (e.g., social media, mobile, cloud computing, business data analytics, Internet of Things, artificial intelligence, machine learning, blockchain). The major continues providing the foundations and hands-on activities to use IS and digital technologies for solving business problems. The academic backbone of the major concludes with the pillars of business modeling and agile design, artificial intelligence-based innovation, and providing the IT and business managerial skills to build solutions for businesses.

Students can complete two possible major elective tracks: Designing Innovative Information Systems or Digital Transformation Management. Alternatively, the student can customize the major elective path by selecting 12 credit hours from the list of major electives in a flexible and student-centric way. The Digital Transformation track focuses on providing the knowledge and managerial skills related to managing cybersecurity, managing agile digital transformation projects and on how to lead and manage digital transformation. The Designing Innovative Information Systems track focuses on providing the technical foundations and skills to design innovative programs and apps, design innovative server-side systems and design databases and data governance.

Students may participate in an internship (elective course), which may involve a summer or a semester of paid professional experience in industry. Internship experience helps show the relevance of on-campus courses to professional work, helps students focus their career plans and often enables students to secure better jobs upon graduation.

Computer Information Systems students may apply early to the M.B.A. degree and double count 9 credit hours of graduate courses toward both degree programs. See the Combined Bachelor's/Master's Degree Program policy in the University Catalog for more information.

Full Description

The Master of Business Administration degree prepares students for responsible leadership positions in private, nonprofit and public organizations. Upon completion of the M.B.A. degree, graduates demonstrate a global mindset and competence in critical thinking, digital technology, communication, teamwork and ethical and sustainable management.

The program welcomes students from the full range of undergraduate degrees. Regardless of their undergraduate education, students will find a challenging program designed to prepare them for management positions in organizations.

The degree is structured for full-time/in-person and full-time or part-time online students:

- The full-time/in-person program is targeted to early career professionals, both nationally and internationally, who wish to jump-start their business career, and to those who wish to make a business-related career change. The program operates in cohorts so that students proceed through the sequence of required courses as a group. Students take six to seven courses each semester (offered in eight-week modules) and are expected to participate in experiential activities such as internships, mentoring and professional development activities. Delivery of the program is accelerated; students are able to earn the M.B.A. degree in 12 to 16 months.
- The online program is designed for those who want maximum flexibility in pursuing their M.B.A. degree. Students can take courses to suit their life: from one course at a time to a full-time course load. This is an ideal program for professionals who intend to keep working full-time while pursing the M.B.A., and for those students who want to pursue their M.B.A. without commuting to campus.

The Business Administration major includes the following optional concentrations:

- The **Accounting** concentration allows students to specialize their degree with courses in managerial and financial accounting, business valuation using financial statements and international accounting. Completion of this concentration is not sufficient to sit for the CPA exam in Ohio unless the student has an undergraduate accounting major.
- The **Business Analytics** concentration allows students to gain the technical, analytical, communication, decision-making and leadership skills needed to glean useful information from data to make strategic business decisions.
- The **Digital Transformation** concentration prepares students for a more dynamic, modular and techie-savvy world.

- The **Finance** concentration allows students to specialize their degree with advanced courses in investments, financial markets and institutions, real estate and other related areas.
- The **Healthcare Administration** concentration provides business students with knowledge of the healthcare setting that will support their capacity to work effectively in a variety of healthcare organizations.
- The **Human Resource Management** concentration allows students to specialize their degree with advanced topics in employee selection and appraisal, organizational analysis and the opportunity for real-world applications.
- The **International Business** concentration allows students to specialize their degree with courses in accounting, marketing, finance and strategy with an international focus. Study abroad options are possible, with no language skills required.
- The **Leadership in Conflict Mediation** concentration allows students to develop advanced skills that will support their capacity to lead in higher level positions.

Students may pursue an online **stackable certificate pathway** to the M.B.A. by completing the Leadership and Management graduate certificate, the Quantitative Business Management graduate certificate and a set of remaining courses to earn the M.B.A. degree. Students who choose a Business Analytics, Financial, Human Resource Management, International Business or Leadership in Conflict Mediation concentration can take one additional course and stack an additional graduate certificate in Business Analytics, Financial Management, Human Resource Management, International Business or Leading Through Challenge.

The following dual degree programs with the M.B.A. are possible. A separate application must be submitted for each program.

- **Combined degree with the Doctor of Podiatric Medicine degree** prepares students to run their own Podiatric Medicine practice. Students can view admission requirements for each program on their respective catalog page.
- **Dual degree with the Master of Architecture degree** is designed for architects or undergraduate architectural students whose career goals include assuming middle or executive management positions in architectural practices, or who are interested in starting their own businesses.

- **Dual degree with the Master of Public Health degree** prepares students for responsible leadership positions and offers an integrated business and public health curriculum designed to help students develop real-world knowledge and skills needed to pursue success and management opportunities in the public health industry.

The Human Resource Management minor covers a range of topic areas taught from both theoretical and applied perspectives. Students are exposed to a wide array of human resource functional areas, including staffing, performance management, training, compensation, human resource information systems and employer-employee rights and responsibilities.

International Business for Business Majors - Minor

Ambassador Crawford College of Business and Entrepreneurship
Department of Management

About This Program

The International Business minor introduces students to cultural issues of a broad, global nature. Students are encouraged to participate in study-abroad programs to complement their studies. Global business is fast becoming an important part of the U.S. economy. The world that college graduates are facing will essentially be a borderless world. This suggests a need to be trained for employment that will have international implications. Whether students take a major in business, fashion design and merchandising, the hard sciences, English or education, some training in global outreach, cultural diversity and "business cultures" will be necessary.

Full Description

The Bachelor of Business Administration degree in Entrepreneurship provides students with the academic background and experiential opportunities needed to view business opportunities from an entrepreneurial perspective. The program helps students recognize market and business opportunities and learn when to seize them or take action, all while operating within the context of limited resources and creating value for the customer.

The program contains numerous opportunities to experience entrepreneurship firsthand. During their senior year, students earn course credit by launching and running a business of their own creation. A practicum can earn students credit while developing their own business or assisting entrepreneurs with their business. Students have many opportunities to meet experienced entrepreneurs who discuss their successes and failures in business. Courses in the major are hands-on, with experiential learning central to the course format.

Entrepreneurship students may apply early to the M.B.A. degree and double count 9 credit hours of graduate courses toward both degree programs. See the Combined Bachelor's/Master's Degree Program policy in the University Catalog for more information.

About This Program

The Entrepreneurship for Non-Business Majors minor brings an entrepreneurial perspective to students' major fields of study. Entrepreneurship is more than a set of tools and techniques for starting and growing a business. It is a mindset, a creative way of looking at opportunities, a passion, doing what one loves, a challenge, persistence and creating wealth and operating a business, whether one owns it or not. Students in the minor are immersed in the entrepreneurial process through coursework, entrepreneurial projects and exposure to many entrepreneurs in the community. Students are prepared for the various aspects of starting a business, acquiring a business, corporate entrepreneurship or working for a small business.

Full Description

The Bachelor of Business Administration degree in Marketing provides a general approach that can be applied in a wide range of areas of business (e.g., for profit, nonprofit, service and manufacturing). The program addresses the breadth within the marketing field through courses (e.g., consumer behavior, marketing research, international marketing, personal selling, advertising and promotion management) that provide the student with an appreciation of all central topic areas in the field.

The Marketing major offers students the opportunity to have a generalist's perspective or to focus on one of four concentrations. Students gain a working knowledge of the theory and practice of marketing and learn the tasks involved in the analysis, planning, implementation and control of marketing programs that result in strategies and tactics used by businesses to sell products to consumers and other businesses.

The Marketing major includes the following concentrations:

- The **Entrepreneurial Marketing** optional concentration is for those with an entrepreneurial spirit. This concentration will offer insights into marketing strategies tailored for startups and small businesses. Students will explore innovative approaches to marketing and learn how to navigate the unique challenges faced by entrepreneurs.
- The **Marketing Analytics** optional concentration focuses on harnessing the power of data to make informed marketing decisions and optimize marketing strategies.
- The **Sales Management** optional concentration is designed to equip students with the skills and knowledge needed to lead successful sales teams, manage customer relationships, and drive revenue growth.
- The **Social Media and Digital Marketing** optional concentration is designed to teach students how to create and implement effective digital marketing campaigns through a strong online presence across various platforms, this concentration will allow students to explore the world of digital marketing and social media.

Marketing students may apply early to the M.B.A. degree and double count 9 credit hours of graduate courses toward both degree programs. See the Combined Bachelor's/Master's Degree Program policy in the University Catalog for more information.

About This Program

The Marketing minor helps students develop the perspectives and skills necessary to understand consumers and to provide customer satisfaction. In today's highly competitive business environment, successful managers must have a strong focus on providing customer satisfaction as well as the ability to research consumer needs, wants and desires; understand what these mean in terms of company offerings; and communicate the benefits of their products or services effectively. Students completing the minor should be equipped to bring a marketing orientation to both profit and not-for-profit organizations.

Admission Requirements

The university affirmatively strives to provide educational opportunities and access to students with varied backgrounds, those with special talents and adult students.

First-Year Students on the Kent Campus: First-year admission policy on the Kent Campus is selective. Admission decisions are based upon cumulative grade point average, strength of high school college preparatory curriculum and grade trends. Students not admissible to the Kent Campus may be administratively referred to one of the seven regional campuses to begin their college coursework. For more information, visit the admissions website for first-year students.

First-Year Students on the Regional Campuses: First-year admission to Kent State's campuses at Ashtabula, East Liverpool, Geauga, Salem, Stark, Trumbull and Tuscarawas, as well as the Twinsburg Academic Center, is open to anyone with a high school diploma or its equivalent. For more information on admissions, contact the Regional Campuses admissions offices.

International Students: All international students must provide proof of proficiency of the English language (unless they meet specific exceptions) through the submission of an English language proficiency test score or by completing English language classes at Kent State's English as a Second Language Center before entering their program. For more information, visit the admissions website for international students.

Former Students: Former Kent State students who have not attended another institution since Kent State and were not academically dismissed will complete the re-enrollment process through the Financial, Billing and Enrollment Center. Former students who attended another college or university since leaving Kent State must apply for admissions as a transfer or post-undergraduate student.

Transfer Students: Students who attended an educational institution after graduating from high school or earning their GED must apply as transfer students. For more information, visit the admissions website for transfer students.

Admission policies for undergraduate students may be found in the University Catalog's Academic Policies.

Students may be required to meet certain criteria to progress in their program. Any progression requirements will be listed on the program's Coursework tab

Admission Requirements

The university affirmatively strives to provide educational opportunities and access to students with varied backgrounds, those with special talents and adult students who graduated from high school three or more years ago.

Admission to the Aeronautical Systems Engineering Technology major is selective.

New Students: Admission into this major requires a minimum 2.700 unweighted high school GPA. Students who do not meet this requirement will be admitted to the Industrial Engineering Technology major. Students may change their major to Aeronautical Systems Engineering Technology after satisfying the below requirements for current students.

Note: Applicants should understand that this is a math-intensive program. Students admitted to the program are expected to demonstrate prerequisite knowledge on a math placement exam (the ALEKS exam) prior to starting their first semester. Students who do not obtain the minimum score required to place into MATH 12011 are at risk of delaying graduation.

Current Students: Students may change their major to Aeronautical Systems Engineering Technology if they meet the following criteria:

- Minimum 2.500 overall Kent State GPA
- Minimum C grade in both ENGR 11001 and ENGR 11002
- Minimum C grade in either MATH 11022 or MATH 12011

Transfer Students: Transfer students must have completed minimum 12 credit hours of college-level coursework with a minimum 2.500 overall GPA for admission to the Aeronautical Systems Engineering Technology major. Students with less than 12 credit hours completed will be evaluated based on their high school transcript using the criteria in the above "new student" section.

International Students: All international students must provide proof of proficiency of the English language (unless they meet specific exceptions) through the submission of an English language proficiency test score or by completing English language classes at Kent State's English as a Second Language Center before entering their program. For more information, visit the admissions website for international students.

Full Description

The Bachelor of Science degree in Aeronautical Systems Engineering Technology successfully prepares graduates of the future to work in multi-disciplinary teams in aeronautical, systems and other engineering technology fields in ways that positively improve efficiency, reduce waste and increase sustainability. The program prepares graduates to enter careers in the design, installation, manufacturing, testing, evaluation, technical sales and maintenance of aeronautical/aerospace systems. Students gain technical expertise in engineering materials, statics, strength of materials, applied aerodynamics, applied propulsion and electronics. Graduates have strengths in the analysis, applied design, development, implementation and oversight of more advanced aeronautical/aerospace systems and processes.

Applicants to this program should understand that this is a math-intensive program.

Students may apply early to the Master of Engineering Technology degree and double count 9 credit hours of graduate courses toward both

degree programs. See the Combined Bachelor's/Master's Degree Program Policy in the University Catalog for more information. Students wishing to pursue aerospace engineering at the graduate level must complete additional undergraduate math courses beyond what is required for this program.

Accreditation

The Bachelor of Science degree in Aerospace Engineering is accredited by the Engineering Accreditation Commission of ABET, www.abet.org, under the General Criteria and the Program Criteria for Aerospace Engineering and Similarly Named Programs.

* Source of occupation titles and labor data comes from the U.S. Bureau of Labor Statistics' Occupational Outlook Handbook. Admission Requirements

The university affirmatively strives to provide educational opportunities and access to students with varied backgrounds, those with special talents and adult students who graduated from high school three or more years ago.

Admission to the Aerospace Engineering major is selective. Applicants should understand that this is a math-intensive program, and the roadmap assumes students start with MATH 12002 their first semester. Students admitted to the program are expected to demonstrate prerequisite knowledge on a math placement assessment (the ALEKS math assessment) or via other means (e.g., AP, IB, CLEP, A levels) prior to registering for their first semester. Students who do not place into MATH 12002 will likely take longer than eight semesters to complete the program.

New Students: Admission into this major requires:

- Minimum 3.0 high school GPA
- Clear demonstration of an ability to be placed directly into MATH 12002 (or its equivalent); this will occur if the student is currently taking or has taken a calculus, pre-calculus or trigonometry course with a minimum C grade *(starting with the fall 2026 admission*

term, a minimum C grade in all math courses listed on the high school transcript (e.g., trigonometry, algebra, geometry) is required)

Students who do not meet the above requirements will be admitted to the Aeronautical Systems Engineering Technology major, provided they meet the minimum admission requirements.

Current Students: Students accepted into other Kent State programs may request to change their major to Aerospace Engineering once they meet the following criteria:

- Minimum 3.000 overall Kent State GPA (*starting with the fall 2026 admission term, minimum 12 credit hours completed at Kent State with a minimum 3.000 overall Kent State GPA is required)*
- Minimum C grade in both MATH 12002 and PHY 23101 *(starting with the fall 2026 admission term, minimum B grade in MATH 11022 OR minimum C grade in MATH 12002 is required)*

Transfer Students: Admission into this major requires:

- Minimum 12 credit hours of college-level coursework
- Minimum 3.000 overall GPA
- Minimum C grade in both MATH 12002 and PHY 23101 (or their equivalents)*(starting with the fall 2026 admission term, minimum B grade in MATH 11022 OR minimum C grade in MATH 12002 or their equivalents is required)*

Transfer students who have completed fewer than 12 credit hours of college-level coursework will be evaluated on both collegiate and high school records and must submit a final high school transcript.

International Students: All international students must provide proof of proficiency of the English language (unless they meet specific exceptions) through the submission of an English language proficiency test score or by completing English language classes at Kent State's English as a Second Language Center before entering their program. Full Description

The Bachelor of Science degree in Aerospace Engineering successfully prepares the aerospace engineers of the future to work in multidisciplinary teams to design products and perform research in innovative ways that affect positive change on a regional, national and global scale. The program focuses on the application of engineering principles to the design, manufacturing and functionality of aerospace vehicles such as aircraft, missiles and spacecraft. Students gain in-depth knowledge of aerodynamics, engineering materials and processes, structures, propulsion, flight mechanics and control, while being exposed to orbital mechanics, space structures and rocket propulsion.

Applicants to this program should understand that this is a math-intensive program.

Students may apply early to the M.S. degree in Aerospace Engineering and double count 9 credit hours of graduate courses toward both degree programs. See the Combined Bachelor's/Master's Degree Program Policy in the University Catalog for more information.

Full Description

The Bachelor of Science degree in Air Traffic and Airspace Management is part of the Federal Aviation Administration's (FAA) Air Traffic-Collegiate Training Initiative (AT-CTI) to provide a broad education in several areas of aviation to operate the National Airspace System in the 21st century. The Air Traffic and Airspace Management major offers practical simulation-based training to prepare students for professional work in air traffic control (ATC) and management. Graduates have the knowledge and skills to work as air traffic controllers, managers or numerous other types of professionals operating in the National Airspace System.

The mission of the Bachelor of Science degree in Air Traffic and Airspace Management is to help prepare students for success in numerous aviation-related fields, including those that are emerging such as advanced air mobility (AAM), space traffic management (upper class E traffic management) and remote and automated operations. As an FAA AT-CTI program, students receive specialized education and training to help them earn employment and advancement in ATC. Additionally, this program focuses on disciplines such as aircraft dispatch (14 CFR Part 65), AAM and many more.

Aircraft Dispatch - Minor

College of Aeronautics and Engineering
www.kent.edu/cae

About This Program

The Aircraft Dispatch minor prepares students to take the written, oral and practical exams leading to the issuance of an aircraft dispatch certificate. An aircraft dispatcher plans for weather, routing, fuel, cargo and special situations. They coordinate with air traffic control, maintenance, crew scheduling and gate agents, and issue a dispatch package to the pilot-in-command. A dispatcher monitors the flight from gate-to-gate and communicates with the crew about any information concerning the flight.

Full Description

The Master of Science degree in Aviation Management and Logistics prepares graduates to perform at an advanced level in organizations that move people and/or goods via air transport.

Students in the program examine the business of aviation logistics and its role in the global supply chain. In addition, they learn techniques necessary to understand and develop an aviation logistics model for producing an accurate and effective forecast for demand of aviation services.

Students are given practical experience in the negotiating, vetting and managing of vendor and labor contracts. They also learn the economic, regulatory, political, geographical and human-centric challenges facing the industry today, including profit strategies, human-error interventions tactics and post-9/11 security legislation concerning air cargo operations.

Safety policy, risk management, assurance and safety promotion are the key focus areas, and students take an in-depth study of the concepts, principals, design, implementation and administration of aviation safety management systems. As weather events are so disruption to an aviation organization, students gain an understanding of hazardous weather and the products to predict weather impact on aviation operations.

Admission Requirements

The university affirmatively strives to provide educational opportunities and access to students with varied backgrounds, those with special talents and adult students.

First-Year Students on the Kent Campus: First-year admission policy on the Kent Campus is selective. Admission decisions are based upon cumulative grade point average, strength of high school college preparatory curriculum and grade trends. Students not admissible to the Kent Campus may be administratively referred to one of the

seven regional campuses to begin their college coursework. For more information, visit the admissions website for first-year students.

First-Year Students on the Regional Campuses: First-year admission to Kent State's campuses at Ashtabula, East Liverpool, Geauga, Salem, Stark, Trumbull and Tuscarawas, as well as the Twinsburg Academic Center, is open to anyone with a high school diploma or its equivalent. For more information on admissions, contact the Regional Campuses admissions offices.

International Students: All international students must provide proof of proficiency of the English language (unless they meet specific exceptions) through the submission of an English language proficiency test score or by completing English language classes at Kent State's English as a Second Language Center before entering their program. For more information, visit the admissions website for international students.

Former Students: Former Kent State students who have not attended another institution since Kent State and were not academically dismissed will complete the re-enrollment process through the Financial, Billing and Enrollment Center. Former students who attended another college or university since leaving Kent State must apply for admissions as a transfer or post-undergraduate student.

Transfer Students: Students who attended an educational institution after graduating from high school or earning their GED must apply as transfer students. For more information, visit the admissions website for transfer students.

Admission policies for undergraduate students may be found in the University Catalog's Academic Policies.

Students may be required to meet certain criteria to progress in their program. Any progression requirements will be listed on the program's Coursework tab

Note: Applicants should understand that this is a math-intensive program. Students admitted to the program are expected to demonstrate prerequisite knowledge on a math placement exam (the ALEKS exam) prior to starting their first semester. Students who fail to obtain the minimum score required to place into the required math courses are at risk of delaying graduation.

Full Description

The Bachelor of Science degree in Computer Engineering Technology prepares students with problem-solving skills and computer technology foundational knowledge to engineer solutions in computer engineering technology (CET) fields. The program provides students with the opportunity to study computer systems and software-hardware interface so that they are capable of analyzing the problems in the computer and networking industry and producing computer engineering, networking and software solutions. The major's curriculum includes materials necessary for students to be eligible for industry certifications (e.g., Cisco, Microsoft, CompTIA) for career advancement.

Computer engineering technologists focus on hardware or software issues. When companies need custom applications and network systems designed, they call the computer engineering technologist. In this age of heavy computer usage, with companies using computers for a large variety of functions, the computer engineering technologist is invaluable in keeping equipment running, updating software, maintaining connectivity and interfacing with users.

Computer engineering technologists typically work for large companies, installing, testing, operating and maintaining the computer networking. They may also find employment with companies that sell computers, at computer repair stores or at independent emergency repair facilities. Other common work locations include computer and peripheral manufacturing facilities, computer distribution facilities, computer research facilities and educational institutions.

Applicants to this program should understand that this is a math-intensive program.

Students may apply early to the Master of Engineering Technology degree and double count 9 credit hours of graduate courses toward both degree programs. See the Combined Bachelor's/Master's Degree Program Policy in the University Catalog for more information.

Full Description

The Bachelor of Science degree in Cybersecurity Engineering prepares students with problem-solving skills and a resourceful mindset to tackle cybersecurity threats in engineering systems. The program provides students with a working knowledge of analysis and evaluation of components and systems with respect to security and maintaining operations in the presence of risks and threats, with an emphasis on engineered systems. Students gain the understanding and skills necessary to address security issues pertaining to stakeholder needs and requirements (from a system engineering perspective) considering the lifecycle of the system from the outset. Design and development of systems, their components and associated networks to increase trustworthiness is a driving concern.

Electronics - Minor

College of Aeronautics and Engineering
www.kent.edu/cae

About This Program

The Electronics minor gives students a basic knowledge in programming, circuits, digital design, electronic devices and control of systems. It also illustrates how digital combinational and sequential circuits work and provides students with some applications of these types of circuits. The minor complements studies in computer science, physics and instrumentation, as well as student interest in a general background on how computers work.

Accreditation

The B.S. degree in Mechanical Engineering Technology is accredited by the Association of Technology, Management and Applied Engineering (ATMAE).

* Source of occupation titles and labor data comes from the U.S. Bureau of Labor Statistics' Occupational Outlook Handbook. Data comprises projected percent change in employment over the next 10 years; nation-wide employment numbers; and the yearly median wage at which half of the workers in the occupation earned more than that amount and half earned less.

Admission Requirements

The university affirmatively strives to provide educational opportunities and access to students with varied backgrounds, those with special talents and adult students who graduated from high school three or more years ago.

Admission to the Mechanical Engineering Technology major is selective.

New Students: Admission into this major requires a minimum 2.700 unweighted high school GPA. Students who do not meet this requirement will be admitted to the Industrial Engineering Technology major. Students may change their major to Mechanical Engineering Technology after satisfying the below requirements for current students.

Note: Applicants should understand that this is a math-intensive program. Students admitted to the program are expected to demonstrate prerequisite knowledge on a math placement exam (the ALEKS exam) prior to starting their first semester. Students who do not obtain the minimum score required to place into the required math courses are at risk of delaying graduation.

Current Students: Students may change their major to Mechanical Engineering Technology if they meet the following criteria:

- Minimum 2.500 overall Kent State GPA
- Minimum C grade in both ENGR 11001 and ENGR 11002
- Minimum C grade in either MATH 11022 or MATH 12011

Transfer Students: Transfer students must have completed minimum 12 credit hours of college-level coursework with a minimum 2.500 overall GPA for admission to the Mechanical Engineering Technology major. Students with less than 12 credit hours completed will be evaluated based on their high school transcript using the criteria in the above "new student" section.

International Students: All international students must provide proof of proficiency of the English language (unless they meet specific exceptions) through the submission of an English language proficiency test score or by completing English language classes at Kent State's English as a Second Language Center before entering their program. For more information, visit the admissions website for international students.

Full Description

The Bachelor of Science degree in Mechanical Engineering Technology prepares graduates with knowledge across engineering technology disciplines for professional careers in mechanical, robotic systems, hydraulics, pneumatics, automation and other related fields that provide solutions to broadly defined challenges. The program teaches design, operation, installation, maintenance and analysis of machinery. This is an engineering technology degree that focuses on hands-on applications and not a traditional mechanical engineering degree. The program prepares students to become technical professionals in current and emerging fields using mechanical and computer-aided engineering. Students learn to develop innovative solutions to problems encountered in manufacturing.

Applicants to this program should understand that this is a math-intensive program.

Students may apply early to the Master of Engineering Technology degree and double count 9 credit hours of graduate courses toward both degree programs. See the Combined Bachelor's/Master's Degree Program Policy in the University Catalog for more information.

Accreditation

The Bachelor of Science degree in Mechatronics Engineering is accredited by the Engineering Accreditation Commission of ABET, www.abet.org, under the General Criteria.

* Source of occupation titles and labor data comes from the U.S. Bureau of Labor Statistics' Occupational Outlook Handbook. Data comprises projected percent change in employment over the next 10 years; nation-wide employment numbers; and the yearly median wage at which half of the workers in the occupation earned more than that amount and half earned less.

Admission Requirements

The university affirmatively strives to provide educational opportunities and access to students with varied backgrounds, those with special talents and adult students who graduated from high school three or more years ago.

Admission to the Mechatronics Engineering major is selective. Applicants should understand that this is a math-intensive program, and the roadmap assumes students start with MATH 12002 their first semester. Students admitted to the program are expected to demonstrate prerequisite knowledge on a math placement assessment (the ALEKS math assessment) or via other means (e.g., AP, IB, CLEP, A levels) prior to registering for their first semester. Students who do not place into MATH 12002 will likely take longer than eight semesters to complete the program.

New Students: Admission into this major requires:

- Minimum 3.0 high school GPA
- Clear demonstration of an ability to be placed directly into MATH 12002 (or its equivalent); this will occur if the student is currently taking or has taken a calculus, pre-calculus or trigonometry course with a minimum C grade *(starting with the fall 2026 admission term, a minimum C grade in all math courses listed on the high school transcript (e.g., trigonometry, algebra, geometry) is required)*

Students who do not meet the above requirements will be admitted to the Mechatronics Engineering Technology major, provided they meet the minimum admission requirements.

Current Students: Students accepted into other Kent State programs may request to change their major to Mechatronics Engineering once they meet the following criteria:

- Minimum 3.000 overall Kent State GPA (*starting with the fall 2026 admission term, minimum 12 credit hours completed at Kent State with a minimum 3.000 overall Kent State GPA is required)*
- Minimum C grade in both MATH 12002 and PHY 23101 *(starting with the fall 2026 admission term, minimum B grade in MATH 11022 OR minimum C grade in MATH 12002 is required)*

Transfer Students: Admission into this major requires:

- Minimum 12 credit hours of college-level coursework
- Minimum 3.000 overall GPA
- Minimum C grade in both MATH 12002 and PHY 23101 (or their equivalents)*(starting with the fall 2026 admission term, minimum B grade in MATH 11022 OR minimum C grade in MATH 12002 or their equivalents is required)*

Transfer students who have completed fewer than 12 credit hours of college-level coursework will be evaluated on both collegiate and high school records and must submit a final high school transcript.

International Students: All international students must provide proof of proficiency of the English language (unless they meet specific exceptions) through the submission of an English language proficiency test score or by completing English language classes at Kent State's English as a Second Language Center before entering their program. For more information, visit the admissions website for international students.

Full Description

The Bachelor of Science degree in Mechatronics Engineering successfully prepares graduates with knowledge across engineering disciplines for professional careers in mechatronics, controls, robotics, automation and other engineering fields that provide solutions to technical challenges and address societal needs. The program integrates mechanical, electrical, computer and controls engineering to understand automated machinery, specifically, how to design it and make it work. Mechatronics engineering revolves around the design, construction and operation of automated systems, robots and intelligent products, which result from the integration of software and hardware.

Using automated systems is becoming more popular for operating equipment or machinery on manufacturing lines, boilers and aircraft to reduce labor costs; increase precision and accuracy; and provide quality and safety for workers. Mechatronic devices can be found in agriculture, hospitals, buildings, homes, automobiles, manufacturing plants, the toy and entertainment industry and aids for the elderly and disabled.

Applicants to this program should understand that this is a math-intensive program.

Students may apply early to the M.S. degree in Mechatronics Engineering and double count 9 credit hours of graduate courses toward both degree programs. See the Combined Bachelor's/Master's Degree Program Policy in the University Catalog for more information.

* Source of occupation titles and labor data comes from the U.S. Bureau of Labor Statistics' Occupational Outlook Handbook. Data comprises projected percent change in employment over the next 10 years; nation-wide employment numbers; and the yearly median wage at which half of the workers in the occupation earned more than that amount and half earned less.

Admission Requirements

The university affirmatively strives to provide educational opportunities and access to students with varied backgrounds, those with special talents and adult students who graduated from high school three or more years ago.

Admission to the Mechatronics Engineering Technology major is selective.

New Students: Admission into this major requires a minimum 2.700 unweighted high school GPA. Students who do not meet this requirement will be admitted to the Industrial Engineering Technology major. Students may change their major to Mechatronics Engineering Technology after satisfying the below requirements for current students.

Note: Applicants should understand that this is a math-intensive program. Students admitted to the program are expected to demonstrate prerequisite knowledge on a math placement exam (the ALEKS exam) prior to starting their first semester. Students who do not obtain the minimum score required to place into MATH 11022 or MATH 12011 are at risk of delaying graduation.

Current Students: Students may change their major to Mechatronics Engineering Technology if they meet the following criteria:

- Minimum 2.500 overall Kent State GPA
- Minimum C grade in both ENGR 11001 and ENGR 11002
- Minimum C grade in either MATH 11022 or MATH 12011

Transfer Students: Transfer students must have completed minimum 12 credit hours of college-level coursework with a minimum 2.500 overall GPA for admission to the Mechatronics Engineering Technology major. Students with less than 12 credit hours completed will be evaluated based on their high school transcript using the criteria in the above "new student" section.

International Students: All international students must provide proof of proficiency of the English language (unless they meet specific exceptions) through the submission of an English language proficiency test score or by completing English language classes at Kent State's English as a Second Language Center before entering their program. For more information, visit the admissions website for international students.

Full Description

The Bachelor of Science degree in Mechatronics Engineering Technology successfully prepares graduates with knowledge across engineering disciplines for professional careers in mechatronics, controls, robotics, automation and related technological fields that provide solutions addressing societal needs and challenges. The program integrates mechanical, electrical, computer and controls. Mechatronics engineering technology revolves around the design, construction and operation of automated systems, robots and intelligent products, which result from the integration of software and hardware.

Using automated systems is becoming more popular for operating equipment/machinery in a host of situations, including on assembly and manufacturing lines, on automobiles and aircraft and in electrical power generations to reduce labor costs, increase precision and accuracy and provide quality and safety for workers.

Graduates from the mechatronics engineering technology program manage and support the design, operation and analysis of mechanical and electrical devices connected with automated systems, robots and computer-integrated manufacturing. They can work in any company that develops, designs or manufactures and markets these devices. Opportunities exist in manufacturing sales as well as research.

Applicants to this program should understand that this is a math-intensive program.

Students may apply early to the Master of Engineering Technology degree and double count 9 credit hours of graduate courses toward both degree programs. See the Combined Bachelor's/Master's Degree Program Policy in the University Catalog for more information.

1 A minimum C grade must be earned to fulfill the writing-intensive requirement.

2 Students scoring 34 or below on the ALEKS math assessment are required to enroll in CAE 12260 until they successfully complete MATH 00022.

Progression Requirements

Successful completion of the Professional Pilot major is an achievable goal for students who stay on track with the program's structured progression. The college support students in maintaining academic standing, obtaining and retaining appropriate medical clearance and successfully meeting course requirements. While challenges may arise, students are encouraged to use available resources and support systems to address them.

Flight Training Ground and Theory Courses

Students must pass all required flight training and associated flight theory courses with a minimum C grade and maintain a minimum 2.500 overall GPA. These courses may **not** be repeated without special approval.

Beyond AERN 15751, all students are required to maintain a minimum 2.500 overall GPA to continue in flight courses. Students must complete all flight courses by the end of the semester following the semester in which they enrolled (e.g., a student who enrolls in a flight course in the fall must complete the course no later than the end of the following spring semester). This requirement is subject to waiver by the chief flight instructor assigned to the flight course. In the absence of an authorized waiver, students who fail to complete any flight course by the end of the subsequent semester after course enrollment will receive the F grade. Flight fees will be refunded in accordance with the university policy regarding tuition credit for dropped courses.

Students must complete the commercial certificate and instrument rating at Kent State to be eligible for the FAA's R-ATP certificate.

Medical Requirements

Pilot certification dictates that certain medical standards be met. As such, all students are required to obtain and maintain FAA medical certification for program eligibility. While it is encouraged for all students to obtain first-class medical certification, all students starting in the Private Pilot Flight courses are required to obtain a minimum third-class medical certification. All flight courses beyond Private Pilot Flight require a minimum second-class medical certification.

Students admitted to the Professional Pilot major must have a medical in hand (minimum third class) before the start of their first flight course, but no later than the end of their first semester. If the medical is deferred (in progress by the FAA), students will have two full semesters to obtain the medical from the initial date their medical was deferred.

Continuing students who have their medical certificate deferred, suspended or revoked will be placed in a medical probationary status and have two full semesters to re-obtain medical clearance. If their medical clearance is not obtained by the end of the second semester, they must change their program to the Aeronautical Studies major.

Progression Ineligibility

A minimum 2.500 major GPA and overall 2.500 GPA is required for the Professional Pilot major. Students who fall below the minimum GPA will have two semesters to raise their GPA to the required minimum level.

Students may become ineligible to continue in the Professional Pilot major and be advised to change their program to the Aeronautical Studies major if any of the following occur:

1. Failure to to raise their major and/or overall GPA to the minimum required;
2. Failure to obtain or retain an appropriate level of medical clearance;
3. Failure of either an FAA-regulated flight theory course or a flight course; and/or
4. Failure to comply with Kent State Code of Student Conduct, Federal Aviation Regulations and policies outlined in the Kent State University Flight Operations Manual.

Admission Requirements

The university affirmatively strives to provide educational opportunities and access to students with varied backgrounds, those with special talents and adult students who graduated from high school three or more years ago.

First-Year Students on the Kent Campus: First-year admission policy on the Kent Campus is selective. Admission decisions are based upon cumulative grade point average, strength of high school college preparatory curriculum and grade trends. Students not admissible to the Kent Campus may be administratively referred to one of the seven regional campuses to begin their college coursework. For more information, visit the admissions website for first-year students.

First-Year Students on the Regional Campuses: First-year admission to Kent State's campuses at Ashtabula, East Liverpool, Geauga, Salem, Stark, Trumbull and Tuscarawas, as well as the Twinsburg Academic Center, is open to anyone with a high school diploma or its equivalent. For more information on admissions, contact the Regional Campuses admissions offices.

International Students: All international students must provide proof of proficiency of the English language (unless they meet specific exceptions) through the submission of an English language proficiency test score or by completing English language classes at Kent State's English as a Second Language Center before entering their program. NURSING ADN

Program and Course Withdrawal

Students withdrawing from the Nursing ADN major are expected to notify the program director. Students who do not register for any required course or drop any required course after registration should notify the program director immediately.

Program Time Limits

Student must complete the nursing course requirements within a maximum of four years after admission to the nursing program. Students are strongly advised to avoid a full-time work schedule.

For students previously in the Nursing ADN major who re-enter as a licensed practical nurse (LPN) or certified paramedic, their four-year limit begins the the term they start the NRST course sequence.

Readmission

Readmission to the Nursing ADN major is based on the decision of the Readmission Committee and seat availability. Readmission is not guaranteed to any student.

Students who left the major before earning the degree and are now a licensed practical nurse (LPN) or a certified paramedic may request readmission through the Advanced Placement Policies for LPNs and Paramedics.

Eligibility for Readmission

To be eligible for readmission, students must satisfy the following requirements:

- Meet with the Nursing ADN program director as soon as possible — after the end of the semester in which the student withdrew or

failed and prior to the start of the next semester — to discuss the readmission process and policies.
- Hold a minimum 2.000 overall GPA from Kent State University.
- Submit a formal request in writing to the Nursing ADN program director. The submission deadlines are:
  - June 1 for returning in the fall semester
  - November 1 for returning in the spring semester at the East Liverpool and Tuscarawas campuses and the Twinsburg Academic Center
  - December 31 for returning in the spring semester at the Ashtabula Campus
  - March 1 for returning in the summer term
- Submit a detailed plan for academic success. The plan must address, in detail, why the student was not successful during the previous attempt, and how the student intends to be successful if readmitted. The student must sign the plan; it will become a contract that the student must follow throughout the remainder of the nursing program.
- For readmitted students who have been out of the program more than one semester: Follow the Nursing Clinical Requirements Policy for Readmitted Students.
- For readmitted students who have been out of the program more than one semester: Demonstrate satisfactory performance of previously learned skills. Students will have three attempts to demonstrate competency. The deadline for completing these skills as required are:
  - July 1 for returning in the fall semester
  - December 1 for returning in the spring semester
  - April 1 for returning in the summer term

After Readmission

- Readmitted students who fail an NRST course may reapply for readmission to the nursing program one time only.
- Any readmitted student who fails to meet the program's progression requirements a second time will not be permitted to continue in the program and will not be eligible to begin another NRST course or be eligible to reapply for readmission.
- Readmitted students are responsible for following the Kent State University Associate Degree Nursing Student Handbook in effect at the time of readmission and changing to the current catalog year.

RESPIRATORY THERAPY Readmission

Students seeking readmission to the A.A.S. degree in Respiratory Therapy must submit a written request to the program director. A minimum 2.000 overall GPA from Kent State University is required for readmission. The decision of readmission is made by the Admission/Readmission Committee and may be based on seat availability.

Students seeking readmission to the program must complete the following:

1. Provide documentation of a current two-step Mantoux test and Basic Life Support (BLS) for Healthcare Providers card.
2. Repeat their BCI/FBI background check, drug testing and either retest or meet all other requirements as outlined in the Progression Requirements.
3. Re-demonstrate previously learned skills prior to entering clinical sites at the discretion of the instructor. Scheduling of re-demonstration of skills must be discussed with the program director prior to re-entering the program.

Students in the withdrawn or failed category will be removed from the status of "Admitted to Technical Study" until they meet all readmission requirements.

Any student who fails to meet the program's requirements a second time will be dismissed from the program and will not be able to register for future RESP courses or be eligible for readmission.

Students who are entering the program for the second time after withdrawing during their first or second semester for non-academic reasons may be excluded from the program completion time limit (three years) and re-start the program as a new student. For more information, see the Program Requirements Completion policy.

Remediation

Competencies in the Clinical Setting

Remediation begins after students who have passed a competency in the laboratory setting but failed the same competency after three attempts in the clinical setting with a clinical instructor. The director of clinical education will re-instruct students in the proper technique and complete remediation documentation with the students. Students are given two weeks to practice and prepare for re-demonstration of the competency. Students will then re-test with a program instructor in the laboratory setting.

- Students who fail the competency at this time will receive an F grade for the course.
- Students who pass the competency will return to the clinical site for demonstrate the competency with a clinical instructor or preceptor. Students will again have three attempts. Students who are unable to pass the competency in the clinical setting a second time will receive an F grade for the course.

Clinical instructors or preceptors will make every effort to complete required competencies with students and make referrals before the last two weeks of the semester.

Competencies in the Laboratory Setting

Students will be remediated in accordance with their course syllabus. Students who fail any competency in the laboratory setting for the third time must meet with the program director prior to attempting the competency for the fourth time.

Time Limits

All students enrolled in the program have a maximum of two years to complete all program requirements. This is inclusive of students in the withdrawn or failed category or status. Students who are entering the program for the second time after withdrawing during their first or second semester for non-academic reasons may be excluded from this and re-start the program as a new student. For more information on re-starting the program, see the Readmission Policy.
